Agilent E1536A

Description

The Agilent E1536A 8-Bit Isolated Digital I/O SCP provides eight bits (channels) with individually programmable threshold levels of 5 V, 12 V, 24 V, or 48 V. Channels are clamped at about 60 V by a “crowbar” protection circuit.

Each channel can be configured as an input port or an output port. Both inputs/outputs have programmable polarity.

The outputs are optically isolated solid state AC/DC Form A relay outputs with a 10 Ω on resistance and 200 mA carrying current capability. The inputs are optically isolated with programmable threshold levels and debounce.

Use the E1536A with the following VXI modules:

Model	Description
E1415A	Algorithmic Closed Loop Controller
E1419A	Multifunction Measurement and Control Module
