

Agilent N2X

Multicast Protocol Conformance Test Suites

N5707A, N5708A and N5709A

Technical Data Sheet

Most comprehensive Multicast protocol conformance test suites enable rapid verification and problem isolation with the industry leading N2X Test Manager.

Agilent Technologies

Key Features

- **Comprehensive PIM-SM protocol conformance testing**
- **Industry leading Test Manager designed to simplify conformance testing**
- **Rapid result diagnosis and problem isolation**
- **Easily extendable test suite**
- **Automatic configuration and control of device under test**
- **Comprehensive test documentation and reporting tools**

Product Overview

The Agilent N2X is the industry's most comprehensive test solution for testing the development and deployment of network services for converging network infrastructures. Agilent N2X delivers unparalleled test realism to verify the ultimate performance, scalability and resilience of carrier grade services and infrastructure.

N2X Productivity Advantage delivers a rich set of automated applications designed to maximize testing productivity. Service providers and network equipment manufacturers will save months of engineering effort by eliminating the need for developing and supporting customized applications.

N2X Productivity Advantage incorporates a comprehensive protocol conformance solution with a unique Test Manager that provides industry leading usability and reporting features for rapid result diagnosis and problem isolation.

The N2X Multicast Protocol Conformance Test Suite has been designed to quickly and comprehensively verify multicast-enabled routers at both the core and edge, as well as routers specifically designated as Rendezvous Point (RP) routers, conforms to applicable protocol standards. Equipment manufacturers and service providers can expect to achieve a higher confidence with regard to their multicast routing implementation and quickly establish a flexible regression test environment with N2X's automated Conformance Test Suite (CTS).

- N5707A – PIM-SM Conformance Test Suite
- N5708A – MLDv2 Conformance Test Suite
- N5709A – IGMPv3 Conformance Test Suite

N2X PIM Conformance Test Suite when combined with the N2X Multicast Protocol Emulation Software provides the fastest and most comprehensive scalability and performance verification of your Multicast networks and devices.

Industry leading Test Manager

The N2X protocol conformance solution incorporates a unique Test Manager with industry leading usability and reporting features. This allows for rapid result diagnosis and problem isolation saving engineers time and effort involved in developing and validating protocol implementations. The Test manager also has the flexibility to be easily integrated within a user's regression strategy.

The tree-based navigation and test suite configuration, dynamic graphical protocol sequence diagram and comprehensive reporting features of the N2X Conformance Test Manager simplifies testing. Combined with the granular test result evaluation (pass, conditional pass, inconclusive and fail), detailed packet decode and filtering capabilities, N2X accelerates resolution of test case errors.

The test configurations (including tester and DUT) can be saved and restored to ensure the exact replication of a previous test run. At the completion of each test, the test results (along with all the configuration and results detail) are automatically saved and available for loading through an integrated result selection panel.

The N2X Conformance Test Manager combined with the PIM-SM test suite provides a comprehensive set of automated tests that assess the protocol compliance and interoperability.

Rapid result diagnosis and problem isolation

The Conformance Test Manager window instantly displays progress at the test case, test group, and test suite level. The progress and results for each test case and for the test as a whole can be viewed in real-time.

Users can view a log of test case events, the actual PDU sequence and PDU decodes. The outcome of each test case is color coded for instant recognition of the result. These features enable users to assess the outcome of a particular test case or test group at a glance and isolate problems quickly.

Multiple instances of the Test Manager can be opened allowing for easy comparison between tests that use the same configuration, but have been run at different times.

Easily extendable test suite

The N2X Conformance Test Suites can be readily extended to include corner cases, verify proprietary features or test features of new standards that have not yet been implemented.

A comprehensive list of programming interfaces, well-documented test case templates and on-line help provide users with a step by step guide on how to write their own test script and make it available for execution through the N2X Test Manager.

A test case written by the user will have all the unique fault isolation and reporting features of the Test Manager.

Automatic configuration and interaction with device under test

Automatic device under test (DUT) control and configuration capabilities further simplify the testing process and allow the N2X Conformance Test Suite to be integrated into users own test environment. The N2X Test Manager provides some commonly used device types with sample configuration parameters that users can easily modify using the GUI. User can also create a new DUT type using the XML and Tcl templates provided. Once the DUT type has been setup users will never need to manually configure the device under test during run time - saving a great deal of testing time.

Comprehensive test documentation and reporting tools

The N2X Conformance Test Manager has an integrated test description and expected PDU sequence diagram, provide quick identification of the test purpose, and its implementation.

These features are crucial when trying to isolate and understand any issues encountered during a test execution.

All information displayed before and after a test execution can be saved into many different file formats for future analysis or printing. This includes test case description documentation, sequence diagrams, test run results, as well as a purpose designed test run report.

Test Suites and Applicable Standards

N5707A PIM-SM Conformance Test Suite

The suite provides automatic conformance verification for the PIM multicast routing protocol standards including support for IPv6.

N5707A-001 PIM-SM Basic CTS License

This suite comprises 267 test cases for the following standards

- Protocol Independent Multicast-Sparse Mode (PIM-SM) – (draft-ietf-pim-sm-v2-new-11.txt)
- Bootstrap Router Mechanism for PIM – (draft-ietf-pim-sm-bsr-09.txt)

N5707A- 002 - PIM CTS Extension License

This suite comprises 85 test cases for the following standards

- BIDIR-PIM - (draft-ietf-pim-bidir-08)
- Source-Specific Multicast – (PIM-SSM) – (RFC 4607 - PIM-SSM section)

N5708A MLDv2 Conformance Test Suite

The suite provides automatic conformance verification for the MLDv2 routing standards including support for IPv6.

N5708A-001 MLDv2 Basic CTS License

This suite comprises 93 test cases for the following standards.

- MLDv2 for IPv6 – (RFC 3810)
- Using MLDv2 for Source-Specific Multicast – (RFC 4604 - MLDv2 component only)

N5709A IGMPv3 Conformance Test Suite

The suite provides automatic conformance verification for the IGMPv3 routing standards.

N5708A-001 IGMPv3 Basic CTS License

This suite comprises 87 test cases for the following standards.

- IGMPv3 – (RFC 3376)
- Using IGMPv3 for Source-Specific Multicast (RFC4604 -IGMPv3 component only)

Software Requirements

Each conformance test suite has a Software and Support Agreement (SSA) contract options associated with it:

- PS-S12-001 - 1 year contract included with initial purchase
- PS-S12-102 - 1 year contract extended to 2 years
- PS-S12-103 - 1 year contract extended to 3 years

Please ensure that you have a current SSA in order to automatically receive future releases and technical product support.

The following N2X software licenses are a pre-requisite to supporting any conformance test suite:

- E7880B - Packets or E7881B - Packets and Protocols

Hardware Requirements

All the conformance test suites are supported on both Ethernet and POS N2X XR test cards.

N2X XP test cards do not support the N2X conformance test application.

www.agilent.com/find/n2x

Agilent N2X

Agilent's N2X multi-service tester combines leading-edge services with carrier grade infrastructure testing and emulation. The N2X solution set allows network equipment manufacturers and service providers to more comprehensively test new services end-to-end, resulting in higher quality of service and lower network operating costs.

Warranty and Support

Hardware Warranty

All N2X hardware is warranted against defects in materials and workmanship for a period of 1 year from the date of shipment.

Software Warranty

All N2X software is warranted for a period of 90 days. The applications are warranted to execute and install properly from the media provided.

This warranty only covers physical defects in the media, whereby the media is replaced at no charge during the warranty period.

Software Updates

With the purchase of any new system controller Agilent will provide 1 year of complimentary software updates. At the end of the first year you can enroll into the Software and Support Agreement (SSA) contract for continuing software product enhancements.

Support

Technical support is available throughout the support life of the product. Support is available to verify that the equipment works properly, to help with product operation, and to provide basic measurement assistance for the use of the specified capabilities, at no extra cost, upon request.

Ordering Information

To order and configure the test system consult your local Agilent field engineer.
