Description

The SN78xxx series are three-terminal positive regulators providing over 1A output current with internal current limiting, thermal shutdown and safe area protection. These regulators are useful in a wide range of applications. Although they are just fixed voltage regulators, the SN78xxx series can be used with external components to obtain adjustable voltages and Currents.

◆ **Absolute Maximum Ratings ($T_a = 25^{\circ}\text{C}$)**

Parameter	Symbol	Limits		Unit
		TO-220F-3L	TO-252-3L	
Input Voltage	V _{IN}	40.0 (V _O =24V)		V
		35.0 (V _O =5 to 18V)		
Power Dissipation	P _d	2.0	1.3	W
Thermal Resistance Junction to Case	R _{ΘJC}	5	5	°C/W
Thermal Resistance Junction to Air	R _{ΘJA}	65	92	°C/W
Junction Temperature	T _J	150		°C
Operate Temperature Range	T _{opr}	-40 ~ +125		°C
Storage Temperature Range	T _{stg}	-55 ~ +150		°C

Absolute maximum ratings indicate limits beyond which damage to the component may occur. Electrical specifications do not apply when operating the device outside of its operating ratings. The maximum allowable power dissipation is a function of the maximum junction temperature, $T_{J(max)}$, the junction-to-ambient thermal resistance, θ_{JA} , and the ambient temperature, T_A .

The maximum allowable power dissipation at any ambient temperature is calculated using:

$PD(max) = (T_{J(max)} - T_A) \div \theta_{JA}$. Exceeding the maximum allowable power dissipation will result in excessive die temperature, and the regulator will go into thermal shutdown.

* Pulse testing techniques are used to maintain the junction temperature as close to the ambient temperature as possible. Thermal effects must be taken into separately.

** This specification applies only for dc power dissipation permitted by absolute maximum ratings.

Typical Application

Fixed Output Regulator

- 1) C_{IN} should be required if regulators are located far from power supply filter
- 2) C_O improves output stability and transient response

Load Regulation

Constant Current Regulator

Adjustable Output Regulator

High Current Voltage Regulator

$$I_O = I_{IN} + \beta_{Q1}(I_{IN} - V_{BEQ1} / R_{IN})$$
