

Reflective Object Sensor

OPB708, OPB709

OPB740 Series, OPB740WZ Series

Features:

- Focused for maximum sensitivity
- Phototransistor or photodarlington output
- Crosstalk does not exceed specified ICEO
- 24" (610 mm) wire length
- 26 AWG wire size

Description:

Each reflective object sensor in the **OPB708, OPB709, OPB740** through **OPB746** and **OPB740WZ** through **OPB746WZ** series consists of an infrared emitting diode and a NPN silicon phototransistor or a photodarlington. The **OPB747WZ** and **OPB748WZ** consist of a Red visible LED and a low light level rejection (R_{BE}) NPN silicon phototransistor. The Red LED allows better contrast ratio when detecting Black marks on a White surface. All these devices are mounted side-by-side on converging optical axes in a black plastic housing focusing on a small area and depth of field.

OPB7 __ WZ series are wired (UL approved wire) devices that offer various lens options, including no windows, blue polysulfone windows for dust protection or opaque aperture windows with offset openings for improved target resolution.

On each sensor included in this data sheet, the photosensor responds to radiation only when a reflective object passes within its field of view.

Custom IC(ON) current binning, special wire lengths and connectorization is available through your OPTEK rep.

Applications:

- Non-contact reflective object sensor
- Assembly line automation
- Machine automation
- Machine safety
- End of travel sensor
- Door sensor
- Thermal Paper Mark

Part Number	LED Peak Wavelength	Sensor	Reflection Distance Inch (mm)	Lead Length/ Wire Type
OPB708	935 nm	Transistor	Min=0.08" [2.04mm] Typ=0.15" [3.81mm] Max=0.30" [7.62mm]	0.150" Minimum
OPB709		Darlington		
OPB740	890 nm	Transistor		
OPB741				
OPB742				
OPB743				
OPB744				
OPB745				
OPB740WZ				Darlington
OPB741WZ	Transistor	24" / 26 AWG Wire		
OPB742WZ				
OPB743WZ				
OPB744WZ				
OPB745WZ				Darlington
OPB746WZ	935 nm		R_{BE} Transistor	
OPB747WZ	645nm			
OPB748WZ			Transistor	

CONTAINS POLYSULFONE
To avoid stress cracking, we suggest using ND Industries' **Vibra-Tite** for thread-locking. **Vibra-Tite** evaporates fast without causing structural failure in OPTEK's molded plastics.
Applies to: OPB460, OPB470, OPB480, OPB490.

Notes:

- The distance from the assembly face to the reflective surface is "d".
- Reflective surface is Eastman Kodak (Catalog #190 3061) neutral white test card with 90% diffuse reflectance as a reflecting surface.
- Crosstalk is the photocurrent measured with current to the input diode, no reflective surface and no ambient light ($E_E = 0$).
