

IAR Embedded Workbench® for M16C and R8C

IAR Embedded Workbench is a set of highly sophisticated and easy-to-use development tools for embedded applications. It integrates the IAR C/C++ Compiler™, assembler, linker, librarian, text editor, project manager, and C-SPY® Debugger in an integrated development environment (IDE). With its built-in chip-specific code optimizer, IAR Embedded Workbench generates very efficient and reliable FLASH/PROMable code for the Renesas M16C and R8C MCU. In addition to this solid technology, IAR Systems also provides professional worldwide technical support.

MODULAR AND EXTENSIBLE IDE

- A seamlessly integrated environment for building and debugging embedded applications
- Powerful project management allowing multiple projects in one workspace
- Build integration with IAR visualSTATE
- Hierarchical project representation
- Dockable and floating windows management
- Smart source browser
- Feature-rich editor with code templates and multi-byte support
- Tool options configurable on global, group of source files, or individual source files level
- Multi-file compilation support
- Flexible project building via batch build, pre/post-build or custom build with access to external tools in the build process.
- Integration with source code control systems
- Extensive device support with ready-made header files, device description files and linker command files
- Ready-made project examples for various evaluation boards

HIGHLY OPTIMIZING C/C++ COMPILER

- Support for C and C++
- Automatic checking of MISRA C rules (MISRA C:2004)
- Support for all devices in M16C/1x-6x and R8C series
- Language extensions for embedded applications with target-specific support,
 - Extended keywords for data/functions defining and declaring with memory/type attributers
 - Pragma directives for controlling compiler's behavior,

such as how it allocates memory

- Intrinsic functions for direct access in C source to low-level processor operations
- 32- and 64-bit floating-point types in standard IEEE format
- Long long support
- Multiple levels of optimizations on code size and execution speed allowing different transformations enabled, such as function inlining, loop unrolling etc.
- Advanced global and target-specific optimizer generating the most compact and stable code

STATE-OF-THE-ART C-SPY® DEBUGGER

- Simultaneous download and debugging of multiple images/applications is supported.
- Complex code and data breakpoints
- Very fine granularity execution control (function call-level stepping)
- Stack window to monitor the memory consumption and integrity of the stack
- Complete support for stack unwinding even at high optimization levels
- Profiling and code coverage performance analysis tools
- Trace simulation utility with expressions to examine execution history
- Versatile monitoring of registers, structures, call chain, locals, global variables and peripheral registers
- Smart STL container display in Watch window
- Symbolic memory window and static watch window
- True editing-while-debugging
- Drag and drop model

- RTOS-awareness debugging with built-in plug-ins for
 - OSEK Run Time Interface (ORTI)
 - Micrium μ C/OS-II
 - Enea OSE Epsilon
 - Segger embOS

HARDWARE DEBUGGER SUPPORT

- Renesas E100 emulator
- Renesas PC7501 emulator
- Renesas E8a on-chip debug
- Renesas Compact emulator
- Renesas ROM-monitor used in many evaluation boards, such as Renesas 3DK kits and GLYN EVBM16C evaluation board
- Other HW debugger support viacompatible output format:
 - Renesas PC4701 emulator
 - Nohau Corporation EMUL5-M16C-PC
 - Ashling Microsystems Ultra-M16C etc.

IAR ASSEMBLER

- A powerful relocating macro assembler with a versatile set of directives and operators
- Built-in C language preprocessor, accepting all C macro definitions

IAR XLINK LINKER

- Link time checksumming of the application image supported.
- Complete linking, relocation and format generation to produce FLASH/PROMable code
- Flexible segment commands allowing detailed control of code and data placement
- Optimized linking removing unused code and data
- Direct linking of raw binary images, for instance multimedia files
- Optional code checksum generation for runtime checking
- Comprehensive cross-reference and dependency memory maps
- Support for over 30 industry-standard output formats, compatible with most popular debuggers and emulators

IAR LIBRARY AND LIBRARY TOOLS

- All required ISO/ANSI C and C++ libraries included

IAR visualSTATE®

IAR visualSTATE is a suite of graphical design automation tools for embedded systems.

- Design an embedded application by drawing objects, events, actions etc in a flowchart-like manner
- Perform extensive tests before committing to hardware: validation of the application behavior, regression testing, verification of the run-time model and simulation on-chip

- All low-level routines such as writechar and readchar provided in full source code
- Lightweight runtime library, user-configurable to match the needs of the application; full source included
- Library tools for creating and maintaining library projects, libraries and library modules
- Listings of entry points and symbolic information

COMPREHENSIVE DOCUMENTATION

- PDF user guides with detailed information
- Efficient coding hints for embedded application
- Extensive step-by-step tutorials
- Context sensitive help and hypertext versions of the user documentation available online

INFORMATION CENTER

A new, web based navigation system that gives easy access to tutorials, product documentation, and example projects.

FREE EVALUATION SOFTWARE

Free 30-day evaluation version and 16K Kickstart edition available at <http://www.iar.com/ewm16c>

- Automatically generate micro-tight C/C++ code that is 100% consistent with your design as well as complete design documentation

Together with IAR Embedded Workbench, IAR visualSTATE forms a complete set of development tools for the M16C and R8C MCU, supporting you through the entire development process.
