

FDC6506P

Dual P-Channel Logic Level PowerTrench™ MOSFET

General Description

These P-Channel logic level MOSFETs are produced using Fairchild Semiconductor's advanced PowerTrench process that has been especially tailored to minimize on-state resistance and yet maintain low gate charge for superior switching performance.

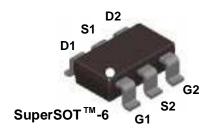

These devices have been designed to offer exceptional power dissipation in a very small footprint for applications where the bigger more expensive SO-8 and TSSOP-8 packages are impractical.

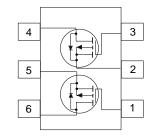

Applications

- Load switch
- Battery protection
- Power management

Features

- -1.8 A, -30 V. $R_{DS(on)} = 0.170 \Omega$ @ $V_{GS} = -10 V$ $R_{DS(on)} = 0.280 \Omega$ @ $V_{GS} = -4.5 V$
- Low gate charge (2.3nC typical).
- Fast switching speed.
- High performance trench technology for extremely low $R_{\scriptscriptstyle DS(ON)}.$
- SuperSOTTM-6 package: small footprint (72% smaller than standard SO-8); low profile (1mm thick).

Absolute Maximum Ratings T_A = 25°C unless otherwise noted

1. $R_{\theta JA}$ is the sum of the junction-to-case and case-to-ambient resistance where the case thermal reference is defined as the solder mounting surface of the drain pins. $R_{a,C}$ is guaranteed by design while $R_{\theta,JA}$ is determined by the user's board design.Both devices are assumed to be operating and sharing the dissipated heat energy equally.
