Hi-Flow[®] 225U

Un-Reinforced Phase Change Thermal Interface Material

Features and Benefits

- Thermal impedance: 0.07°C-in 2/W (@25 psi)
- · Hi-Row coating will resist dripping
- Thermally conductive 55°C phase change compound
- Available in roll form with kiss-cut parts

Hi-Row 225U is designed for use as a thermal interface material between a computer processor and a heat sink. The product consists of a thermally conductive 55℃ phase change compound coated on a release liner and supplied on a carrier.

Above its phase change temperature, Hi-Row 225U wets-out the thermal interface surfaces and flows to produce low thermal impedance. Hi-Row 225U requires pressure of the assembly to cause flow.

Application Methods:

- 1. Hand-apply to 35°- 45°C heat sink. The heat sink is heated in an oven or via heat gun to between 35°- 45°C. The Hi-How 225U part is then applied like an adhesive pad. The heat sink is cooled to room temperature and packaged. A protective tab liner remains in place until the unit is ready for final assembly. The protective tab can be readily removed from the applied Hi-Row 225U pad at a maximum temperature of 28°C.
- 2. Automated equipment with 30-psi pressure. A pick-and-place automated dispensing unit can be used to apply the Hi-Row 225U pad to a room-temperature heat sink. The placement head should have a sili-

rubber pad, and should apply approximately 30-psi pressure to the pad on transfer to the 25° - 35°C heat sink Once applied, the protective tab can be readily removed from the Hi-Row 225U pad at a maximum temperature of 28℃.

TYPICAL PROPERTIES OF HI-FLOW 225U						
PROPERTY	IMPERIALVALUE		METRIC VALUE		TEST METHOD	
Color	Black		Black		Visual	
Reinforcement Carrier	None		None		_	
Thickness (inch) / (mm)	0.0015		0.036		ASTM D374	
Continuous Use Temp (℉) / (℃)	302		150		_	
Phase Change Temp (℉) / (℃)	131		55		ASTM D3418	
ELECTRICAL						
Hame Rating	V-O		V-O		U.L. 94	
THERMAL						
Thermal Conductivity (W/m-K) (1)	1.0		1.0		ASTM D5470	
THERMAL PERFORMANCE vs PRESSURE						
Pressure (psi)		10	25	50	100	200
TO-220 Thermal Performance (°C/W)		0.53	0.47	0.39	0.34	0.32
Thermal Impedance (°C-in²/W) (2)		80.0	0.07	0.06	0.05	0.04

1) This is the measured thermal conductivity of the Hi-Row coating It represents one conducting layer in a three-layer laminate. The Hi-Row coatings are phase change compounds. These layers will respond to heat and pressure induced stresses. The overall conductivity of the material in post-phase change, thin film products is highly dependent upon the heat and pressure applied. This characteristic is not accounted for in ASTM D5470. Please contact Bergquist Product Management if additional specifications are required. 2) The ASTM D5470 test fixture was used and the test sample was conditioned at 70°C prior to test. The recorded value includes interfacial thermal resistance. These values are provided for reference only Actual application performance is directly related to the surface roughness, flatness and pressure applied.

Typical Applications Include:

- Computer and peripherals
- High performance computer processors
- Graphic cards
- Power modules

HF225U

Configurations Available:

• Roll form with tabs kiss-cut parts - no holes

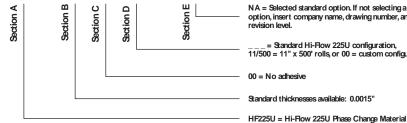

Hi-Row 225U is limited to a square or rectangular part design. Dimensional tolerance is +/- 0.020 inch (0.5mm).

Building a Part Number

0.0015 - 00

NA = Selected standard option. If not selecting a standard option, insert company name, drawing number, and revision level.

Standard Options

= Standard Hi-Flow 225U configuration, 11/500 = 11" x 500' rolls, or 00 = custom configuration

Standard thicknesses available: 0.0015"
