

**32 M-WORD BY 72-BIT SYNCHRONOUS DYNAMIC RAM MODULE
REGISTERED TYPE****Description**

The MC-4532DA726 is a 33,554,432 words by 72 bits synchronous dynamic RAM module on which 18 pieces of 128M SDRAM: μ PD45128441 are assembled.

These modules provide high density and large quantities of memory in a small space without utilizing the surface-mounting technology on the printed circuit board.

Decoupling capacitors are mounted on power supply line for noise reduction.

Features

- 33,554,432 words by 72 bits organization (ECC type)
- Clock frequency and access time from CLK

Part number	/CAS latency	Clock frequency (MAX.)	Access time from CLK (MAX.)	Module type
MC-4532DA726EFB-A80	CL = 3	125 MHz	6 ns	PC100 Registered DIMM Rev. 1.2 Compliant
	CL = 2	100 MHz	6 ns	
MC-4532DA726EFB-A10	CL = 3	100 MHz	6 ns	
	CL = 2	77 MHz	7 ns

MC-4532DA726XFB-A80	CL = 3	125 MHz	6 ns	
	CL = 2	100 MHz	6 ns	
MC-4532DA726XFB-A10	CL = 3	100 MHz	6 ns	
	CL = 2	77 MHz	7 ns	

- Fully Synchronous Dynamic RAM, with all signals referenced to a positive clock edge
- Pulsed interface
- Possible to assert random column address in every cycle
- Quad internal banks controlled by BA0 and BA1 (Bank Select)
- Programmable burst-length (1, 2, 4, 8 and Full Page)
- Programmable wrap sequence (Sequential / Interleave)

Not all devices/types available in every country. Please check with local Elpida Memory, Inc. for availability and additional information.**

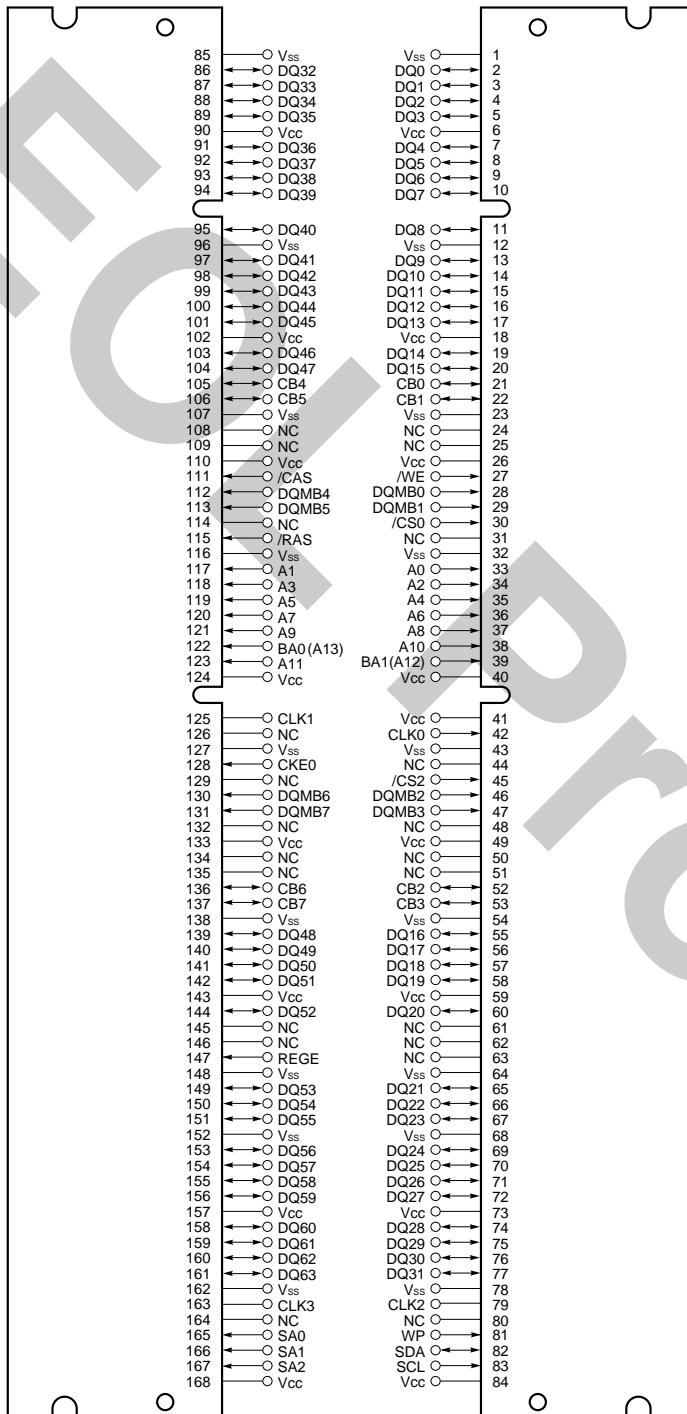

- Programmable /CAS latency (2, 3)
- Automatic precharge and controlled precharge
- CBR (Auto) refresh and self refresh
- All DQs have $10\ \Omega \pm 10\%$ of series resistor
- Single $3.3\ \text{V} \pm 0.3\ \text{V}$ power supply
- LVTTTL compatible
- 4,096 refresh cycles / 64 ms
- Burst termination by Burst Stop command and Precharge command
- 168-pin dual in-line memory module (Pin pitch = 1.27 mm)
- Registered type
- Serial PD

- Remarks**
1. The value of all resistors of DQs is 10 Ω.
 2. D0 - D17: μ PD45128441 (8M words \times 4 bits \times 4 banks)
 3. REGE \leq V_{IL}: Buffer mode
REGE \geq V_{IH}: Register mode
 4. Register: HD74ALVC16835
PLL: HD74CDC2509B

Electrical Specifications

- All voltages are referenced to V_{SS} (GND).
- After power up, wait more than 1 ms and then, execute power on sequence and CBR (Auto) refresh before proper device operation is achieved.

Absolute Maximum Ratings

Parameter	Symbol	Condition	Rating	Unit
Voltage on power supply pin relative to GND	V_{CC}		-0.5 to +4.6	V
Voltage on input pin relative to GND	V_T		-0.5 to +4.6	V
Short circuit output current	I_O		50	mA
Power dissipation	P_D		21	W
Operating ambient temperature	T_A		0 to 70	°C
Storage temperature	T_{stg}		-55 to +125	°C

Caution Exposing the device to stress above those listed in Absolute Maximum Ratings could cause permanent damage. The device is not meant to be operated under conditions outside the limits described in the operational section of this specification. Exposure to Absolute Maximum Rating conditions for extended periods may affect device reliability.

NOTES FOR CMOS DEVICES

① PRECAUTION AGAINST ESD FOR SEMICONDUCTORS

Note:

Strong electric field, when exposed to a MOS device, can cause destruction of the gate oxide and ultimately degrade the device operation. Steps must be taken to stop generation of static electricity as much as possible, and quickly dissipate it once, when it has occurred. Environmental control must be adequate. When it is dry, humidifier should be used. It is recommended to avoid using insulators that easily build static electricity. Semiconductor devices must be stored and transported in an anti-static container, static shielding bag or conductive material. All test and measurement tools including work bench and floor should be grounded. The operator should be grounded using wrist strap. Semiconductor devices must not be touched with bare hands. Similar precautions need to be taken for PW boards with semiconductor devices on it.

② HANDLING OF UNUSED INPUT PINS FOR CMOS

Note:

No connection for CMOS device inputs can be cause of malfunction. If no connection is provided to the input pins, it is possible that an internal input level may be generated due to noise, etc., hence causing malfunction. CMOS devices behave differently than Bipolar or NMOS devices. Input levels of CMOS devices must be fixed high or low by using a pull-up or pull-down circuitry. Each unused pin should be connected to V_{DD} or GND with a resistor, if it is considered to have a possibility of being an output pin. All handling related to the unused pins must be judged device by device and related specifications governing the devices.

③ STATUS BEFORE INITIALIZATION OF MOS DEVICES

Note:

Power-on does not necessarily define initial status of MOS device. Production process of MOS does not define the initial operation status of the device. Immediately after the power source is turned ON, the devices with reset function have not yet been initialized. Hence, power-on does not guarantee out-pin levels, I/O settings or contents of registers. Device is not initialized until the reset signal is received. Reset operation must be executed immediately after power-on for devices having reset function.

CAUTION FOR HANDLING MEMORY MODULES

When handling or inserting memory modules, be sure not to touch any components on the modules, such as the memory IC, chip capacitors and chip resistors. It is necessary to avoid undue mechanical stress on these components to prevent damaging them.

When re-packing memory modules, be sure the modules are NOT touching each other. Modules in contact with other modules may cause excessive mechanical stress, which may damage the modules.

- The information in this document is current as of September, 2000. The information is subject to change without notice. For actual design-in, refer to the latest publications of Elpida's data sheets or data books, etc., for the most up-to-date specifications of Elpida semiconductor products. Not all products and/or types are available in every country. Please check with an Elpida Memory, Inc. for availability and additional information.

No license, express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of Elpida or others.
- Descriptions of circuits, software and other related information in this document are provided for illustrative purposes in semiconductor product operation and application examples. The incorporation of these circuits, software and information in the design of customer's equipment shall be done under the full responsibility of customer. Elpida assumes no responsibility for any losses incurred by customers or third parties arising from the use of these circuits, software and information.
- While Elpida endeavours to enhance the quality, reliability and safety of Elpida semiconductor products, customers agree and acknowledge that the possibility of defects thereof cannot be eliminated entirely. To minimize risks of damage to property or injury (including death) to persons arising from defects in Elpida semiconductor products, customers must incorporate sufficient safety measures in their design, such as redundancy, fire-containment, and anti-failure features.
- Elpida semiconductor products are classified into the following three quality grades:
"Standard", "Special" and "Specific". The "Specific" quality grade applies only to semiconductor products developed based on a customer-designated "quality assurance program" for a specific application. The recommended applications of a semiconductor product depend on its quality grade, as indicated below. Customers must check the quality grade of each semiconductor product before using it in a particular application.
"Standard": Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment and industrial robots
"Special": Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment and medical equipment (not specifically designed for life support)
"Specific": Aircraft, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems and medical equipment for life support, etc.
The quality grade of Elpida semiconductor products is "Standard" unless otherwise expressly specified in Elpida's data sheets or data books, etc. If customers wish to use Elpida semiconductor products in applications not intended by Elpida, they must contact an Elpida Memory, Inc. in advance to determine Elpida's willingness to support a given application.
(Note)
(1) "Elpida" as used in this statement means Elpida Memory, Inc. and also includes its majority-owned subsidiaries.
(2) "Elpida semiconductor products" means any semiconductor product developed or manufactured by or for Elpida (as defined above).
