CS8816(AF/AN/CP/AM/AN-1)

16-Bit Constant Current LED Driver with 3.0V to 5.5V Supply Voltage

■ Description

The CS8816 is a 16-Bit constant current LED driver IC which is designed for LED displays. The output current can be adjusted by using an external resistor. All outputs will have the same current drive level which is crucial in LED display application. This driver has built-in 16-bit constant current outputs, a 16-bit shift register, and a 16-bit latch circuit. These drivers have been designed by using CMOS process.

■ Feature

- Output current capability: 70mA each output
- Constant current range: 5mA to 70mA
- For common anode LED application
- Power supply voltage range VDD=3.0V to 5.5V
- Maximum output drain voltage 7.0V
- Serial data transfer rate: 25MHz(Cascade Connection)
- Operating temperature range: -40 to 85 degree C

■ Timing Diagram

Note:

1. The latch circuit is a level-latch, not an edge-triggered latch.
2. The latch circuit holds data when LATCH pin low. When the LATCH pin is at high-level, the latch circuit passes the data from input to output. When ENABLE pin is at low-level, the latch is data transferred to the output pin OUT0~OUT15. When ENABLE pin is at high-level, the OUT0~OUT15 is turned off regardless of the latch data.

■ **Test Circuit**

(RL=162Ohm, CL=10pf, VL=5.0V)

■ Timing Waveform

■ Output Current vs. R-EXT (VDD=5V)

$$I_{out} = (1.22/R_{ext}) \times 14.62$$

■ Typical Application

LED supply voltage is set-up by following equation:

$$V_{LED} = V_{CE} + V_f + V_o$$

To prevent too much power dissipated by driver due to the higher V_{LED} , an additional R can be introduced to reduce the V_o when output is consuming current.

$$R = (V_{LED} - V_{CE} - V_f - V_o \text{ min}) / (I_o \text{ max} * \text{Bit max})$$
