

### OVERVIEW

The SM5050A is a single-output clock generator IC that generates standard high-frequency clocks derived from a 20 to 40MHz crystal oscillator master clock. The high-frequency output stage uses optimized PLL circuits for low jitter output. The oscillator capacitors  $C_G$  and  $C_D$  are built-in, realizing a high-frequency output oscillator by just the connection of a crystal. Two program inputs allows selection from 4 frequency multipliers, making the SM5050A able to generate multi-standard frequency clock outputs.

## OUTPUT FREQUENCY SETTINGS

Program inputs		Multiplier ratio	Master clock frequency [MHz]	Output frequency [MHz]	Supply voltage [V]
P0	P1				
LOW	LOW	× 4	25.00	100	2.7 to 3.6
LOW	HIGH	× 4.25	25.00	106.25	
HIGH	LOW	× 5	25.00	125	
			26.66	133.3	
HIGH	HIGH	× 6.25	24.8832	155.52	3.0 to 3.6
			26.66	166.6	

Note: The output frequency range is 100 to 166.6MHz. The master clock frequency can be adjusted to any value within the range 20 to 40MHz, so the master clock frequency and multiplier should be selected such that the output frequency is within the output frequency range.
