

for FDI VME Boards

Fixed Frequency Filters with Programmable Amplifiers

Description

The PGAB5 and PGAL5 Series of fixed frequency filters with programmable gain amplifiers utilize digitally controlled gain modules that were designed for Frequency Devices' multi-channel VME board products to condition DC-coupled wide-band signals. Amplifiers are programmed by an 8-bit serial data stream for gain selection using clock, data and strobe inputs.

Other standard performance features include differential input, single ended output, 5V interface logic and low noise/distortion. Available options include AC coupled input (all models) and/or differential output (VM32PAFF only).

Features/Benefits:

- Offers a low cost, versatile and convenient way to provide up to 32 channels of precision filtering and amplification in a single width B-size (6U) VME form factor.
- Phase match down to 1.0° with gain accuracy of 0.1 dB provides precision performance solutions to design engineers, system integrators and OEM's.
- Butterworth or Bessel transfer functions with a broad range of corner frequencies are offered to meet a wide range of applications.

Filter/Amplifier Options:

VM32PAFF-PGAB5-100

3-pole Butterworth, 100 Hz to 100 kHz
-12 dB to +60 dB gain in 6 dB steps

VM32PAFF-PGAB5-300

3-pole Butterworth, 100 Hz to 300 kHz
-12 dB to +42 dB gain in 6 dB steps

VM2.0PAFF-PGAB5-2.0

4-pole Butterworth, >100 kHz to 2.0 MHz
-12 dB to +36 dB gain in 6 dB steps

VM32PAFF-PGAL5-100

3-pole Bessel, 100 Hz to 100 kHz
-12 dB to +60 dB gain in 6 dB steps

VM32PAFF-PGAL5-300

3-pole Bessel, 100 Hz to 300 kHz
-12 dB to +42 dB gain in 6 dB steps

VM2.0PAFF-PGAL5-2.0

4-pole Bessel, >100 kHz to 2.0 MHz
-12 dB to +36 dB gain in 6 dB steps
