Specifications subject to change without notice.

Note 1 Surface temperature must not exceed  $80^{\circ}\text{C}$ . SOT89 package to be at or below  $110^{\circ}\text{C}$ . SOT89 package is  $90^{\circ}\text{C}$  at  $25^{\circ}\text{C}$  ambient temperature.

Note 2 Peak inrush occurs over a 1 to 3 ms time period, during initial startup.

Note 3 The input voltage to the driver must be within its operating characteristic before the driver is enabled, otherwise the driver may not start or may shut down unexpectedly.

Note 4 Input impedance is 5.0 kOhms to GND.

## Application Information

The ERG SFDEB3926F has been designed to be configured in multiple ways:

### NO DIMMING

- OPERATION: The SFD driver can be configured to operate without dimming by pulling up the Enable Pin (J1-5).
- Pins 1 and 2 of connector J1 must be connected to +Vin, between 10 and 18 Vdc. Pins 3 and 4 of connector J1 must be connected to GND.

### EXTERNAL PWM DIMMING

- OPERATION: External PWM configuration as shown in Figure 1 allows the user to control display brightness with an externally generated PWM signal. The user is responsible to provide the PWM signal. A dimming ratio up to 5000:1 at  $\leq 200$  Hz is possible with this configuration.
- DIMMING: Dimming is accomplished by applying a PWM signal to the Enable Pin (J1-5). PWM on and off levels are specified in the Operating Characteristics section of the data sheet. Display brightness is modulated by controlling the PWM duty cycle as shown in Graph 1.
- Pins 1 and 2 of connector J1 must be connected to +Vin, between 10 and 18 Vdc. Pins 3 and 4 of connector J1 must be connected to GND.
