Handling instructions of UV-photodiode dies on blue tape (Nitto's SWT 20)

EPIGAP's UV-photodiode dies are delivered on adhesive blue tape rings. For mounting these dies have to be removed from the tape. They are sensitive to surface touching so they should only be handled from the side. To minimize mechanical stress or chipping use only plastic tweezers or die collets for picking. Because larger dies are stronger sticked to the tape use one round point needle of about 1mm diameter or several pin point needles from the rear side to loosen the dies before picking.
