R1218x SERIES

Step-up DC/DC converter for White LED Backlight

NO.EA-166-111123

OUTLINE

The R1218x Series are PWM control type step-up DC/DC converter ICs with low supply current.

The R1218x is fully dedicated to drive White LED with constant current. Each of these ICs consists of an NMOS FET, an oscillator, a PWM comparator, a voltage reference unit, an error amplifier, a current limit circuit, an under voltage lockout circuit (UVLO), an over-voltage protection circuit (OVP).

The R1218x can drive white LEDs with high efficiency with low supply current. A diode is built-in the R1218xxx1A, therefore it is possible to drive up to 4LEDs without an external diode. The R1218xxx2A, an external diode is necessary, however, up to 7 serial LEDs can be driven with the R1218xxx2A.

Constant current can be set with an external resistance value. Dimming control is possible by PWM signal for CE pin. Feedback voltage is 0.2V, therefore power loss by current setting resistor is small and efficiency is good. Maximum duty cycle is internally fixed, Typ. 91% to 92%. LEDs can be driven from low voltage. Protection circuits are the current limit of Lx peak current, the over voltage limit of output, and the under voltage lockout function.

Packages are standard SOT-23-6 and very tiny DFN(PLP)1820-6.

FEATURES

- Input voltage..... 1.8V to 5.5V
- Built-in 400mA, 1.5Ω, 20V Nch MOSFET and diode (R1218xxx1A)
- Built-in 400mA, 1.5Ω, 33V Nch MOSFET (R1218xxx2A)
- Oscillator Frequency (PWM control)..... 1.2MHz
- Maximum Duty Cycle ..... Typ. 91% to 92%
- Feedback Voltage ..... Typ. 0.2V
- UVLO Threshold Voltage ..... Typ. 1.6V (Hysteresis Typ. 0.1V)
- Lx Current limit Protection..... Typ. 700mA
- Over Voltage Protection (OVP) Threshold.... Typ. 9.5V (R1218x021A)
  Typ. 14.0V (R1218x031A)
  Typ. 18.5V (R1218x041A)
  Typ. 23.0V (R1218x052A)
  Typ. 27.5V (R1218x062A)
  Typ. 31.5V (R1218x072A)
- LED dimming control..... by external PWM signal (Frequency 200Hz to 5kHz) to CE pin
  by feedback voltage and filtered PWM signal (high frequency)
- Packages ..... DFN(PLP)1820-6, SOT-23-6

APPLICATION

- White LED Backlight for portable equipment

SELECTION GUIDE

The OVP threshold, the built-in diode, and the package for the ICs can be selected at the user's request.

Product Name	Package	Quantity per Reel	Pb Free	Halogen Free
R1218Kxxxx-TR	DFN(PLP)1820-6	5,000 pcs	Yes	Yes
R1218Nxxxx-TR-FE	SOT-23-6	3,000 pcs	Yes	Yes

xxxx: The combination of the OVP threshold and with/without of built-in diode can be designated.

Code	OVP Threshold	Built-in Diode
021A	9.5V	Yes
031A	14.0V	Yes
041A	18.5V	Yes
052A	23.0V	No
062A	27.5V	No
072A	31.5V	No

ABSOLUTE MAXIMUM RATINGS

Electronic and mechanical stress momentarily exceeded absolute maximum ratings may cause the permanent damages and may degrade the life time and safety for both device and system using the device in the field.
The functional operation at or over these absolute maximum ratings is not assured.

RECOMMENDED OPERATING CONDITIONS (ELECTRICAL CHARACTERISTICS)

All of electronic equipment should be designed that the mounted semiconductor devices operate within the recommended operating conditions. The semiconductor devices cannot operate normally over the recommended operating conditions, even if when they are used over such conditions by momentary electronic noise or surge. And the semiconductor devices may receive serious damage when they continue to operate over the recommended operating conditions.

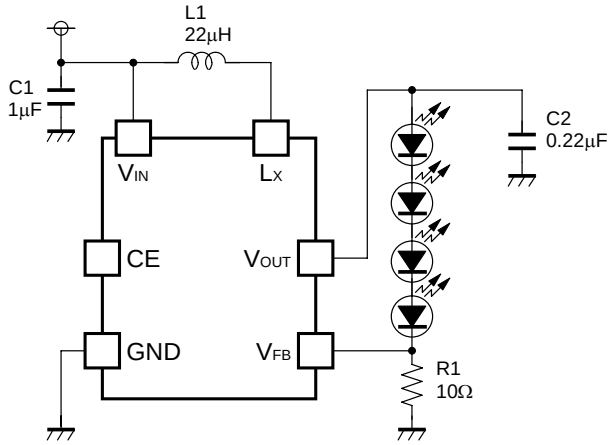
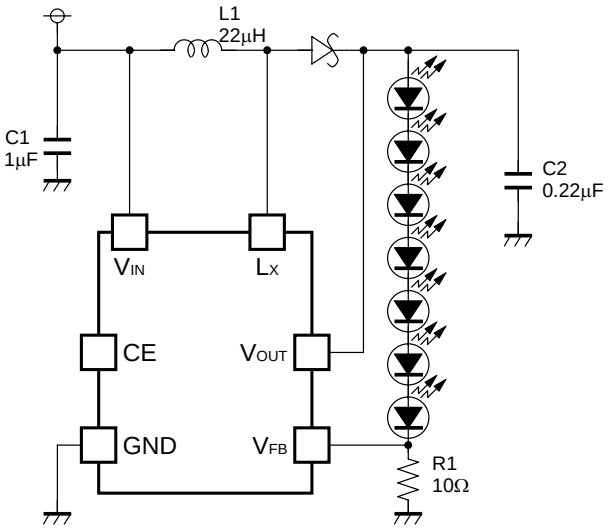
TYPICAL APPLICATIONS



R1218x041A



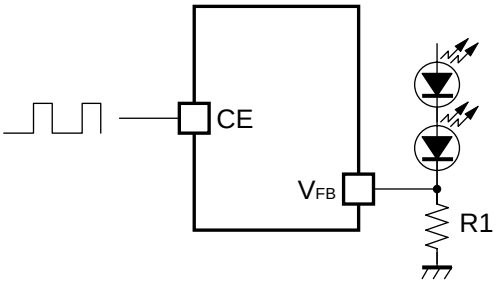
R1218x072A

- **LED Current setting**

  LED current can be set with feedback resistor(R1)
  I_{LED}=0.2 / R1

- **LED Dimming Control, Softstart**

  (1) LED dimming control by PWM signal to CE pin
  LED dimming control is possible by forcing PWM signal to CE pin.
  When the power-on or start up with CE pin, softstart function works, however, after that, if the CE pin is set as "L" and set CE pin "H" again during the shutdown delay time, softstart function is disabled and starts up fast to normal mode, therefore 200Hz to 5kHz PWM signal is standard. By the CE pin input, LED turns on and off. Average LED current varies depending on the duty cycle of CE input. Too high frequency PWM signal is not effective because of its delay.

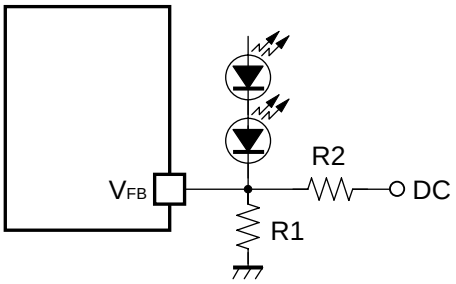


Dimming controle by CE pin input

(2) Dimming control by DC voltage

LED dimming control is also possible by using the DC voltage to V_{FB} pin. LED current is adjustable by DC voltage and resistors, R1 and R2 in the following figure.

I_{LED}=(DC − 0.2) / R2 − 0.2 / R1

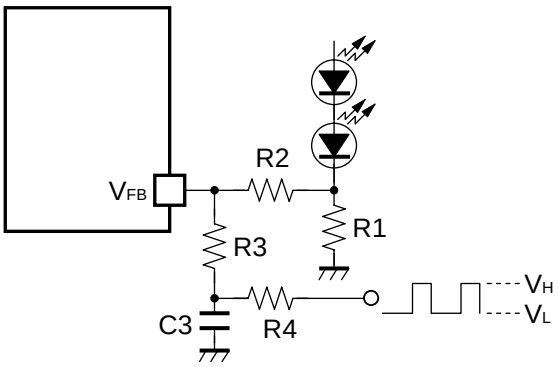


Dimming control by DC voltage

(3) Dimming control by feedback voltage and filtered PWM signal

LED dimming control is also possible by using the feedback voltage and filtered PWM signal.

LED current is adjustable according to the "H" level (V_H) and "L" level(V_L) of PWM signal and resistors, R1, R2, R3, and R4 in the following figure.



Dimming controle by filtered PWM signal

Duty=0% to 100% PWM signal duty cycle can be used up to the maximum LED current and minimum LED current as in the next formulas.

I_{LEDMIN}={0.2 − R2 × (V_H − 0.2) / (R3 + R4)} / R1

I_{LEDMAX}={0.2 − R2 × (V_L − 0.2) / (R3 + R4)} / R1

For example, supposed that the PWM signal level is set as 2.5V/0V, to adjust the LED current range from 0mA to 20mA by the duty cycle, our recommendation external components values are, R1=10Ω, R2=5.1kΩ, R3=51kΩ, R4=5.1kΩ or around.

C3 should be set large enough to regard the PWM signal as adjustable DC voltage by the filter. In this method, higher frequency control than the frequency against the CE pin can be used for dimming control.
For example, if the frequency is 40kHz, 0.1μF or more capacitor is our recommendation value as C3.

- **Selection of Inductors**

The peak current of the inductor at normal mode can be calculated as next formula:

$I_{Lx}peak = 1.25 \times I_{LED} \times V_{OUT} / V_{IN} + 0.5 \times V_{IN} \times (V_{OUT} - V_{IN}) / (L \times V_{OUT} \times fosc)$

When the start-up or dimming control by CE pin, transient current flows, the peak current must be equal or less than the current limit of the IC. The peak current should not beyond the rating current of the inductor. For example, for 4 serial LED drive from V_{IN}=3.6V, recommendation value of the inductor is 22μH or more.

- **Selection of Capacitors**

Set 1μF or more value bypass capacitor C1 between V_{IN} pin and GND pin as close as posible.
Set 0.22μF or more capacitor C2 between V_{OUT} and GND pin.

5. The products listed in this document are intended and designed for use as general electronic components in standard applications (office equipment, telecommunication equipment, measuring instruments, consumer electronic products, amusement equipment etc.). Those customers intending to use a product in an application requiring extreme quality and reliability, for example, in a highly specific application where the failure or misoperation of the product could result in human injury or death (aircraft, spacevehicle, nuclear reactor control system, traffic control system, automotive and transportation equipment, combustion equipment, safety devices, life support system etc.) should first contact us.
6. We are making our continuous effort to improve the quality and reliability of our products, but semiconductor products are likely to fail with certain probability. In order to prevent any injury to persons or damages to property resulting from such failure, customers should be careful enough to incorporate safety measures in their design, such as redundancy feature, firecontainment feature and fail-safe feature. We do not assume any liability or responsibility for any loss or damage arising from misuse or inappropriate use of the products.
7. Anti-radiation design is not implemented in the products described in this document.
8. Please contact Ricoh sales representatives should you have any questions or comments concerning the products or the technical information.

RICOH COMPANY., LTD. Electronic Devices Company

■Ricoh presented with the Japan Management Quality Award for 1999.
Ricoh continually strives to promote customer satisfaction, and shares the achievements of its management quality improvement program with people and society.

■Ricoh awarded ISO 14001 certification.
The Ricoh Group was awarded ISO 14001 certification, which is an international standard for environmental management systems, at both its domestic and overseas production facilities. Our current aim is to obtain ISO 14001 certification for all of our business offices.

RoHS Compliant
Ricoh completed the organization of the Lead-free production for all of our products. After Apr. 1, 2006, we will ship out the lead free products only. Thus, all products that will be shipped from now on comply with RoHS Directive.
