RICOH RP300x Series

0.8% Accuracy, Voltage Detector with Delay Function

NO.EA-306-130326

OUTLINE

The RP300x Series are CMOS-based voltage detector (VD) ICs with a built-in output delay circuit. Internally, a single IC consists of a voltage reference unit, a comparator, a resistor net for setting detector threshold, a manual reset circuit, an output delay circuit and an output driver transistor.

The RP300x Series are available in internally fixed detector threshold type. When the V_{DD} voltage becomes lower than the preset voltage, the RP300xxxxA/C generates a "L" reset signal and the RP300xxxxB (custom IC[*1]) generates a "H" reset signal. The detector threshold accuracy is as high as ±1.0% when $-V_{SET}$[*2]<1.7V and ±0.8% when 1.7V≤$-V_{SET}$.

The reset output signal remains asserted for 50ms, 100ms (custom IC) or 200ms after the V_{DD} voltage rises above the threshold voltage or when manual reset is canceled. The RP300x Series are designed to ignore fast transients on the V_{DD} pin. The output delay time accuracy is as high as ±5.0%.

The RP300x Series are available in an Nch open drain output type or in a CMOS output type.

The RP300x Series are offered in an ultra-small DFN(PLP)1010-4B package or in a SOT-23-5 package.

[*1] For more information about a custom IC, please contact our sales representatives.
[*2] $-V_{SET}$ is defined as a preset detector threshold.

FEATURES

- Supply Current (I_{SS}) ········ Typ. 0.95μA ($-V_{SET}$=3.08V, V_{DD}=3.18V)
- Operating Voltage Range (V_{DD}) ········ 0.72V to 5.50V (25°C)
- Detector Threshold Range ($-V_{DET}$) ········ 1.1V, 2.32V, 2.63V, 2.7V, 2.8V, 2.93V, 3.08V, 4.38V, 4.6V
- Detector Threshold Accuracy ········ ±1.0% ($-V_{SET}$<1.7V), ±0.8% (1.7V≤$-V_{SET}$)
- Detector Threshold Temperature Coefficient ········ Typ. ±50ppm/°C
- Released Output Delay Time (t_{DELAY}) ········ Typ. 50ms,100ms (custom IC), 200ms
- Released Output Delay Time Accuracy ········ ±5% (25°C), ±15% (-40°C to 85°C)
- Package ········ DFN(PLP)1010-4B, SOT-23-5
- Output Type ········ Nch Open Drain output, CMOS Output
- Reset Signal ········ Active-low, Active-high (custom IC)

APPLICATIONS

- Voltage monitoring for handheld communication equipment, camera and VCRs.
- Voltage monitoring for battery-powered equipment

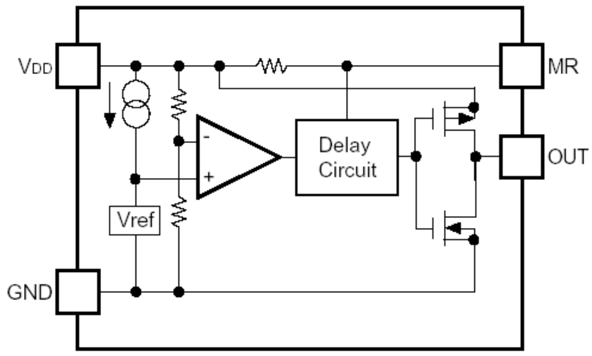

Figure 2. RP300xxxxC (CMOS Output)

SELECTION GUIDE

With the RP300x Series, the detector threshold, the package type, the released output delay time and the output type are user-selectable options.

Product Name	Package	Quantity per Reel	Pb Free	Halogen Free
RP300Kxxy∗(z)-TR	DFN(PLP)1010-4B	10,000pcs	Yes	Yes
RP300Nxxy∗(z)-TR-FE	SOT-23-5	3,000pcs	Yes	Yes

xx: Specify -V_{SET} from 1.1V(11), 2.32V(23), 2.63V(26), 2.7V(27), 2.8V(28), 2.93V(29), 3.08V(30), 4.38V(43), 4.6V(46).
z: If -V_{SET} includes the 3rd digit, indicate the digit of 0.01V.
Ex. If -V_{SET} is 2.63V, indicate as RP300x26xx3-TR-x.

y: Specify the released output delay time.
(A) 50ms
(B) 100ms (custom IC)
(D) 200ms

∗: Specify the output type.
(A) Nch Open Drain Output
(B) Nch Open Drain Inverting Output (custom IC)
(C) CMOS Output

PIN CONFIGULATIONS

- DFN(PLP)1010-4B
- SOT- 23-5

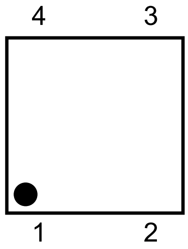

Figure 3. Top View

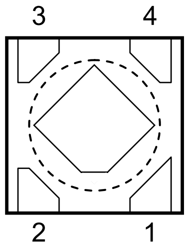

Figure 4. Bottom View

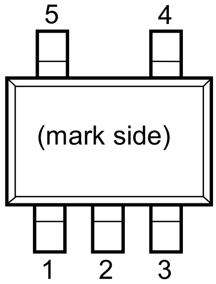

Figure 5. Mark Side

PIN DESCRIPTION

RP300K: DFN(PLP)1010-4B

Pin No.	Symbol	Pin Description
1	OUT	Output Pin RP300xxxxA/C: asserts an active-low reset signal when a voltage drops below the detector threshold. RP300xxxxB: asserts an active-high reset signal when a voltage drops below the detector threshold. (custom IC)
2	MR	Manual Reset Input Pin: active-low
3	GND	Ground Pin
4	V_{DD}	Input Pin

The tab on the bottom of the package enhances thermal performance and is electrically connected to GND (substarate level). It is recommended that the tab be connected to the ground plane on the board. If not, the tab can be left open.

RP300N: SOT-23-5

Pin No.	Symbol	Description
1	MR	Manual Reset Input Pin: active-low
2	GND	Ground Pin
3	NC	No Connection
4	OUT	Output Pin RP300xxxxA/C: asserts an active-low reset signal when a voltage drops below the detector threshold. RP300xxxxB: asserts an active-high reset signal when a voltage drops below the detector threshold. (custom IC)
5	V_{DD}	Input Pin

ABSOLUTE MAXIMUM RATINGS

Symbol	Item	Rating		Unit
V_{IN}	Input Voltage	6.0		V
OUT	Output Voltage (Nch Open Drain Output)	-0.3 to 6.0		V
	Output Voltage (CMOS Output)	-0.3 to V_{DD} +0.3		
MR	Manual Reset Pin	-0.3 to V_{DD} +0.3		V
I_{OUT}	Output Current	20		mA
P_D	Power Dissipation (Standard Land Pattern)*3	DFN(PLP)1010-4B	400	mW
		SOT-23-5	420	
Ta	Operating Temperature Range	-40 to +85		ºC
Tstg	Storage Temperature Range	-55 to +125		ºC

*3 Refer to the next page for detailed information about Power Dissipation.

ABSOLUTE MAXIMUM RATINGS

Electronic and mechanical stress momentarily exceeded absolute maximum ratings may cause the permanent damages and may degrade the life time and safety for both device and system using the device in the field. The functional operation at or over these absolute maximum ratings is not assured.

RECOMMENDED OPERATING CONDITIONS (ELECTRICAL CHARACTERISTICS)

All of electronic equipment should be designed that the mounted semiconductor devices operate within the recommended operating conditions. The semiconductor devices cannot operate normally over the recommended operating conditions, even if when they are used over such conditions by momentary electronic noise or surge. And the semiconductor devices may receive serious damage when they continue to operate over the recommended operating conditions.

POWER DISSIPATION (DFN(PLP)1010-4B)

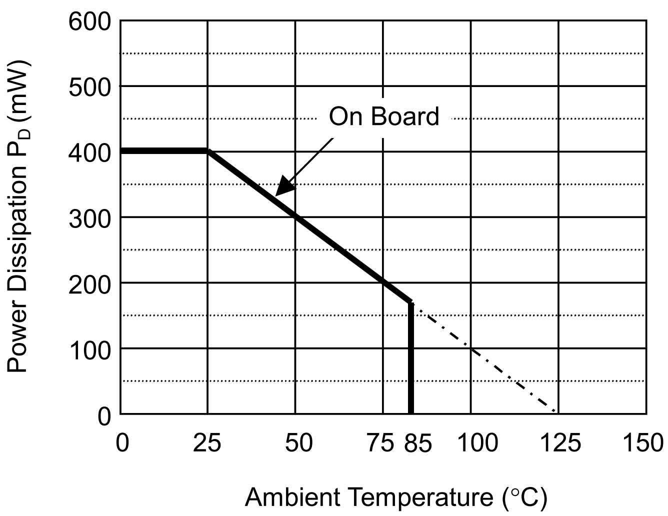
Power Dissipation (P_D) of the package is dependent on PCB material, layout, and environmental conditions. The following conditions are used in this measurement.

Measurement Conditions

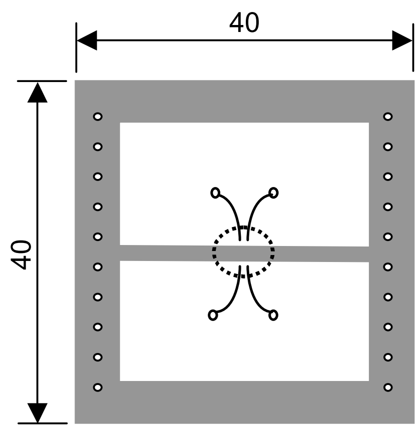
	Standard Land Pattern
Environment	Mounting on Board (Wind Velocity=0m/s)
Board Material	Glass Cloth Epoxy Plastic (Double-sided)
Board Dimensions	40mm x 40mm x 1.6mm
Copper Ratio	Top side: Approx. 50%, Back side: Approx. 50%
Through-holes	ϕ 0.54mm x 24pcs

Measurement Result: (Ta=25°C, Tjmax=125°C)

	Standard Land Pattern
Power Dissipation	400mW
Thermal Resistance	θja = (125-25°C)/0.4W = 250°C/W
	θjc = 67 °C/W



Power Dissipation



Measurement Board Pattern

IC Mount Area (Unit : mm)

POWER DISSIPATION (SOT-23-5)

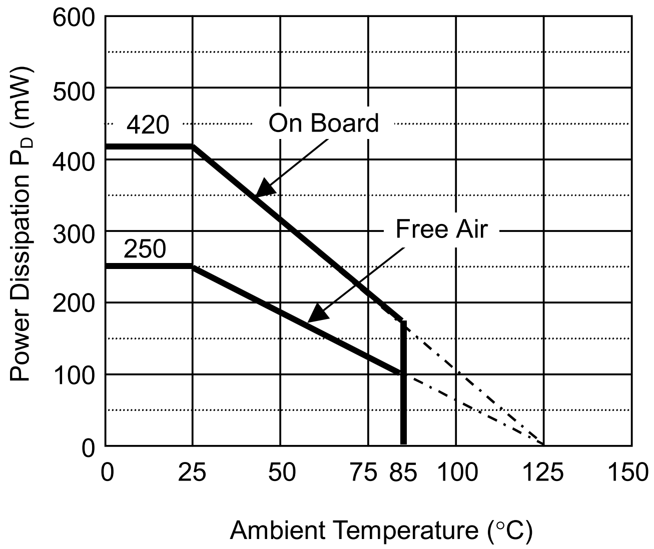
Power Dissipation (P_D) of the package is dependent on PCB material, layout, and environmental conditions. The following conditions are used in this measurement. This data is taken from SOT-23-6.

Measurement Conditions

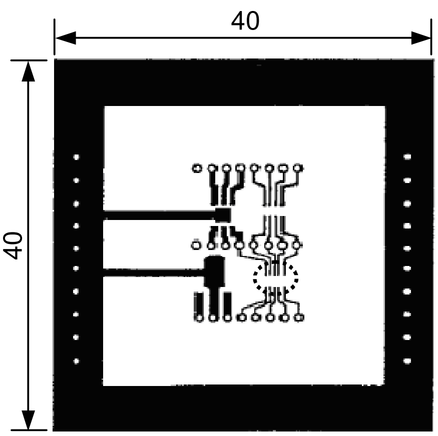
	Standard Land Pattern
Environment	Mounting on Board (Wind Velocity=0m/s)
Board Material	Glass Cloth Epoxy Plastic (Double-sided)
Board Dimensions	40mm x 40mm x 1.6mm
Copper Ratio	Top side: Approx. 50%, Back side: Approx. 50%
Through-holes	ϕ 0.5mm x 44pcs

Measurement Result: (Ta=25°C, Tjmax=125°C)

	Standard Land Pattern	Free Air
Power Dissipation	420mW	250mW
Thermal Resistance	θja = (125-25°C)/0.42W= 238°C/W	400°C/W



Power Dissipation



Measurement Board Pattern

IC Mount Area (Unit: mm)

RICOH

ELECTRICAL CHARACTERISTICS

The specifications surrounded by ☐ are guaranteed by Design Engineering at -40ºC ≤ Ta ≤ 85ºC.

RP300x Series (Ta=25ºC)

Symbol	Item	Conditions		Min.	Typ.	Max.	Unit
$-V_{DET}$ [*4]	Detector Threshold (Ta = 25 ºC)	$-V_{SET}$ [*4] < 1.7V		×0.99		×1.010	V
		1.7V ≤ $-V_{SET}$		×0.992		×1.008	V
	Detector Threshold (-40 ºC ≤ Ta ≤ 85 ºC)	$-V_{SET}$ < 1.7V		×0.982		×1.018	V
		1.7V ≤ $-V_{SET}$		×0.984		×1.016	V
I_{SS1}	Supply Current 1	$V_{DD} = -V_{SET}$ -0.1V, I_{OUT} = 0A				3.2	μA
I_{SS2}	Supply Current 2	$V_{DD} = -V_{SET}$ +0.1V, I_{OUT} = 0A				3.1	μA
V_{DD}	Operating Voltage	Ta = 25ºC		0.72		5.5	V
		-40 ºC ≤ Ta ≤ 85 ºC		0.80		5.5	V
I_{OUT}	Output Current (Driver Output Pin)	Nch $V_{DD} = -V_{SET}$ -0.1V V_{DS} = 0.3V	$-V_{SET}$ ≥ 1.1V	0.45			mA
			$-V_{SET}$ ≥ 1.6V	2.5			mA
			$-V_{SET}$ ≥ 2.7V	4.8			mA
		Nch Inverting[*5] $V_{DD} = -V_{SET}$+0.1V V_{DS} = 0.3V	$-V_{SET}$ ≥ 1.1V	0.45			mA
			$-V_{SET}$ ≥ 1.4V	2.5			mA
			$-V_{SET}$ ≥ 2.5V	4.8			mA
		Pch CMOS $V_{DD} = -V_{SET}$ +0.1V V_{DS} = -0.3V	$-V_{SET}$ ≥ 1.1V	-0.15			mA
			$-V_{SET}$ ≥ 1.6V	-0.45			mA
			$-V_{SET}$ ≥ 2.7V	-0.8			mA
I_{LEAK}	Nch Driver Leakage Current	V_{DD} = 5.5V V_{DS} = 5.5V	RP300xxxxA/C			0.15	μA
		$V_{DD} = -V_{SET}$ -0.1V V_{DS} = 5.5V	RP300xxxxB[*6]				
R_{MR}	MR Pin Pull-up Resistance			0.21	0.45	0.90	MΩ
V_{IH}	MR Pin Input Voltage “H”	$V_{DD} \geq -V_{SET}$ +0.1V		0.75 ×V_{DD}			V
V_{IL}	MR Pin Input Voltage “L”	$V_{DD} \geq -V_{SET}$ +0.1V				0.4	V
t_{DELAY} [*8]	Released Output Delay Time	V_{DD} = 0.8V → $-V_{SET}$ +1.0V	RP300xxxAx	47.5	50	52.5	ms
			RP300xxxBx[*7]	95	100	105	ms
			RP300xxxDx	190	200	210	ms
		-40 ºC ≤ Ta ≤ 85 ºC		t_{SET}[*8] ×0.85		t_{SET}× 1.15	%
$\Delta -V_{DET} / \Delta Ta$	Detector Threshold Temperature Coefficient	-40 ºC ≤ Ta ≤ 85 ºC			±50		ppm /ºC

All test items listed under Electrical Characteristics are done under the pulse load condition (Tj≈Ta=25ºC) except Detector Threshold Temperature Coefficient.

[*4] $-V_{DET}$ is defined as an actual detector threshold and $-V_{SET}$ is defined as a preset detector threshold.

[*5] Nch open drain inverting output type is only applicable to the RP300xxxxB which is a custom IC.

[*6] The RP300xxxxB is a custom IC.

[*7] The RP300xxxBx is a custom IC.

[*8] t_{DELAY} is defined as an actual released output delay time and t_{SET} is defined as a preset released output delay time.

TIMING CHART

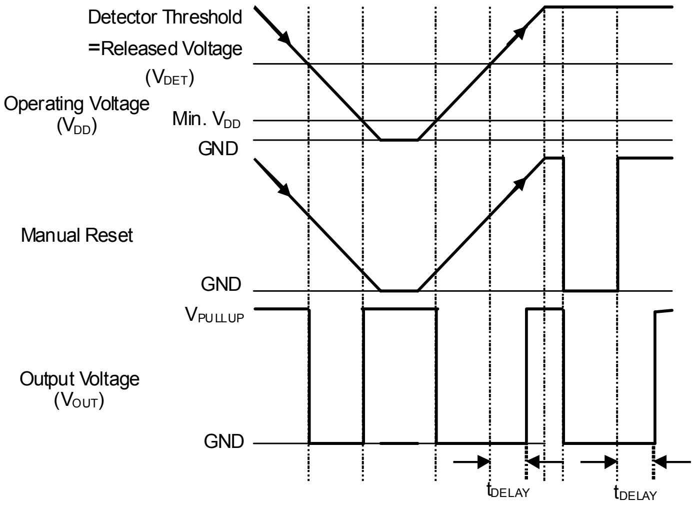


Figure 6. RP300xxxxA/C

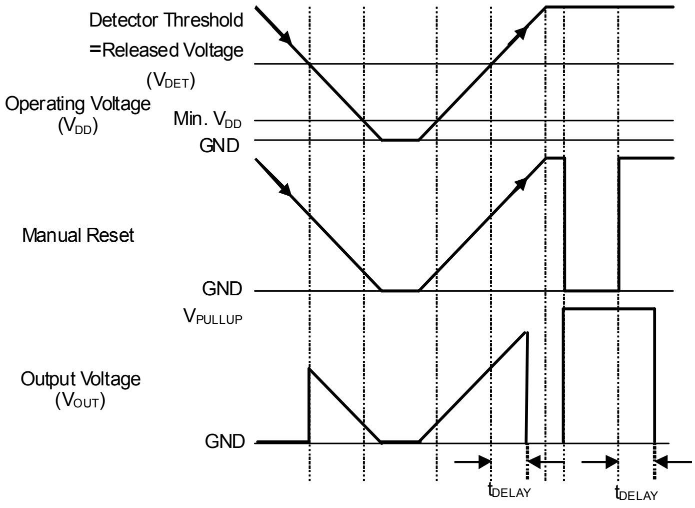

Figure 7. RP300xxxxB

Release Output Delay Time (t_{DELAY})

t_{DELAY} is defined as follows.

1. Nch Open Drain Output
   Release output delay time starts after the OUT pin is pulled up to 5.5V with a 470kΩ resistor, and the V_{DD} voltage is shifted from 0.8V to $-V_{SET}$ + 1.0V. It ends when the output voltage reaches 1.0V.
2. Nch Open Drain Inverting Output (custom IC)
   Release output delay time starts after the OUT pin is pulled up to 5.5V with a 470kΩ resistor, and the V_{DD} voltage is shifted from 0.8V to $-V_{SET}$ + 1.0V. It ends when the output voltage reaches V_{DD}/2V.
3. CMOS Output
   Release output delay time starts when the V_{DD} voltage is shifted from 0.8V to $-V_{SET}$ + 1.0V and ends when the output voltage reaches V_{DD}/2V.

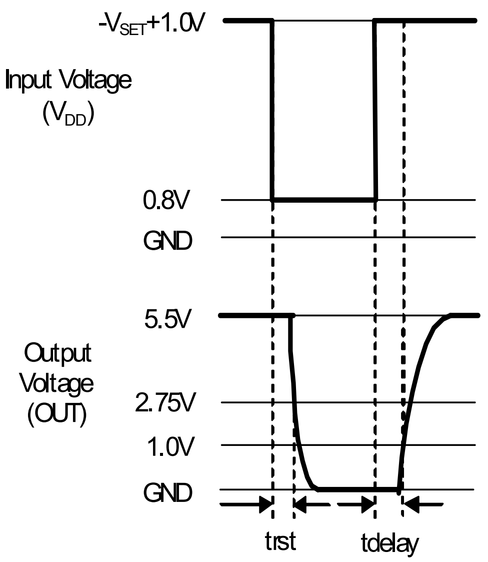

Figure 8. Nch Open Drain Output

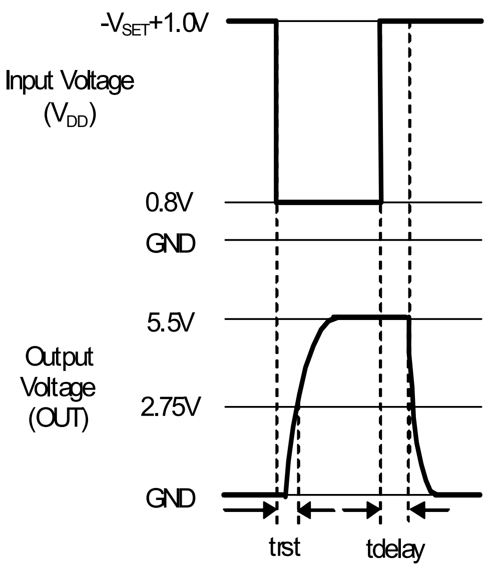

Figure 9. Nch Open Drain Inverting Output

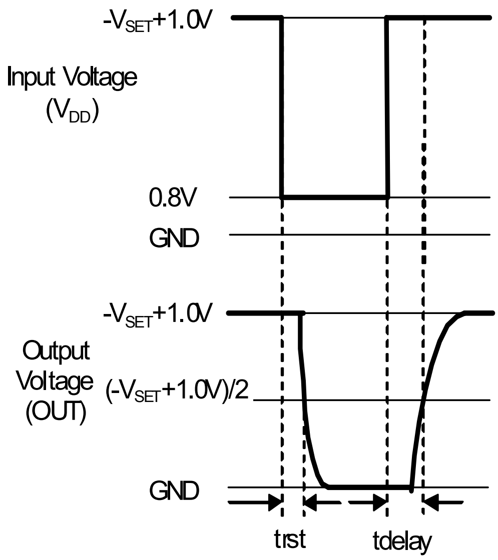

Figure 10. CMOS Output

THEORY OF OPERATION

RP300xxxxA/C

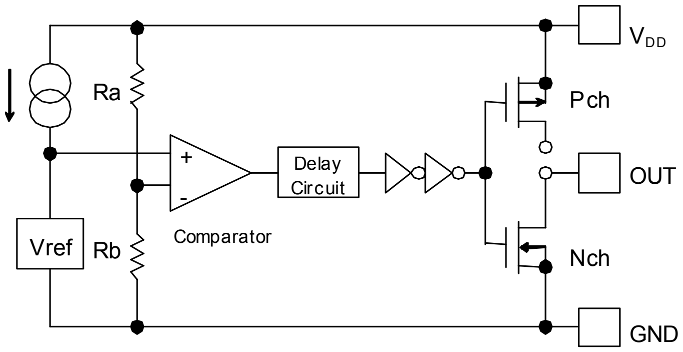

Figure 11. Block Diagram

- For CMOS Output, the Nch Tr. drain and the Pch Tr. drain are connected to the OUT pin inside the IC.
- For Nch Open Drain Output, the Nch Tr. drain is connected to the OUT pin inside the IC. Pull up the OUT pin or V_{DD} pin to the external voltage level.

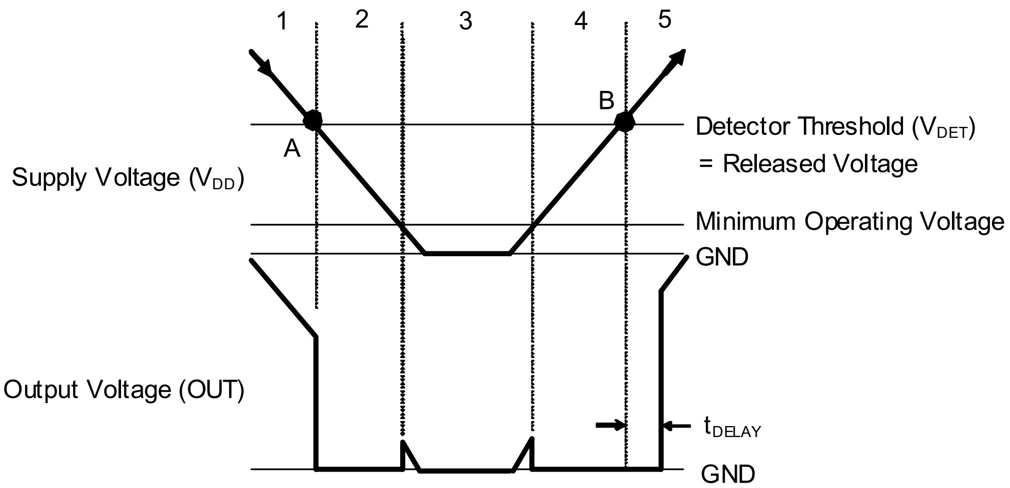

Figure 12. Timing Chart

1. The output voltage is equalized to the V_{DD} voltage (CMOS Output), or to the pull-up voltage (Nch Open Drain Output).
2. The V_{DD} voltage drops to the detector threshold (A point) which means Vref ≥ V_{DD} x Rb / (Ra+Rb). The comparator output shifts from “L” to “H” voltage and the output pin voltage will be equalized to the GND voltage.
3. If the V_{DD} voltage is lower than the minimum operating voltage, the output voltage becomes unstable.
4. The output pin voltage is equalized to the GND voltage.
5. The V_{DD} voltage becomes higher than the release voltage (B point) which means Vref < V_{DD} x Rb / (Ra+Rb), and the comparator output shifts from “H” to “L” voltage, and the output pin voltage is equalized to the V_{DD} voltage (CMOS Output) or to the pull-up voltage (Nch Open Drain Output).

Note: There’s no hysteresis between the V_{DD} voltage and the released voltage.

RP300xxxxB

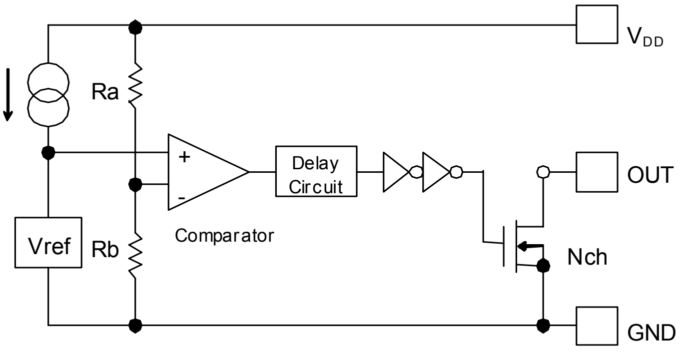

Figure 13. Block Diagram

・ The Nch Tr. drain is connected to the OUT pin inside the IC. Pull up the OUT pin or V_{DD} pin to the external voltage level.

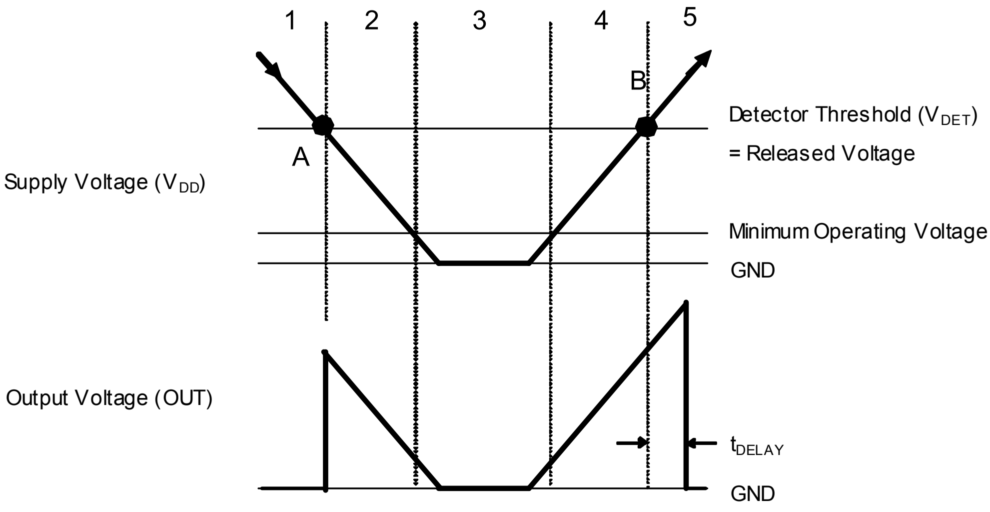

Figure 14. Timing Chart

1. The output voltage is equalized to the GND voltage.
2. The V_{DD} voltage drops to the detector threshold (A point) which means Vref ≥ V_{DD} x Rb / (Ra+Rb). The comparator output shifts from “H” to “L” voltage and the output pin voltage shifts from the pull-up voltage to “L” voltage.
3. If the V_{DD} voltage is lower than the minimum operating voltage, the output voltage becomes unstable.
4. The output voltage is equalized to the pull-up voltage.
5. The V_{DD} voltage becomes higher than the release voltage (B point) which means Vref < V_{DD} x Rb / (Ra+Rb). The comparator output shifts from “L” to “H” voltage, and the output pin voltage is equalized to the GND voltage.

   Note: There’s no hysteresis between the V_{DD} voltage and the released voltage.

Detector Operation vs. Glitch Input Voltage

The RP300x Series have built-in rejection of fast transients on the V_{DD} pins. The rejection of transients depends on both the duration and the amplitude of the transient. The amplitude of the transient is measured from the bottom of the transient to the negative threshold voltage of the RP300x Series, as shown in Figure 16.

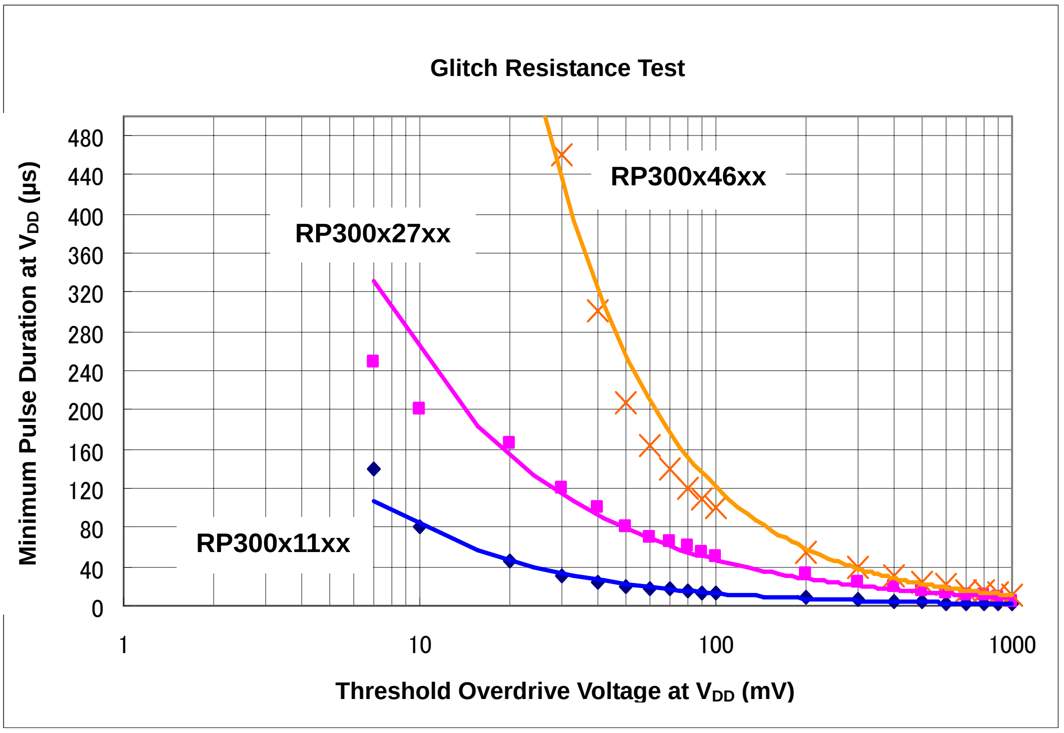

Figure 15. Minimum Pulse Duration at V_{DD} vs. Overdrive Voltage at V_{DD}

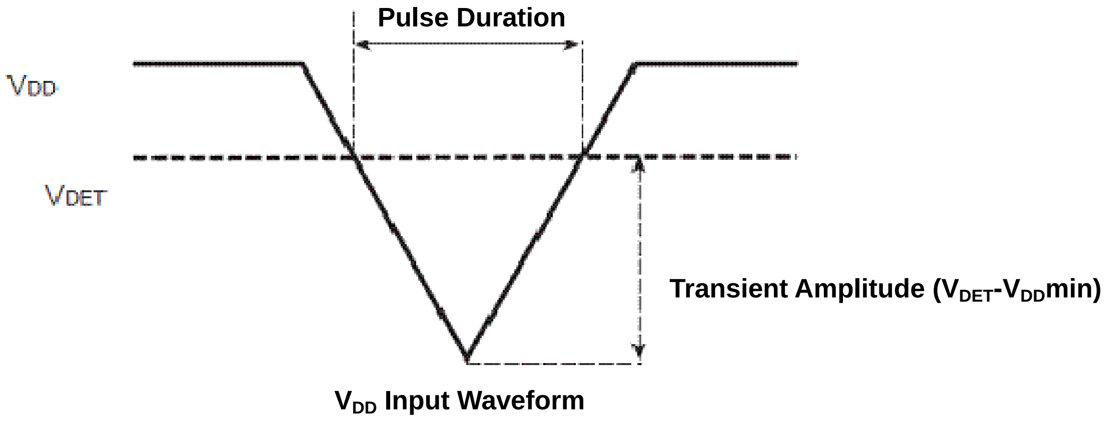

Figure 16. Voltage Transient Measurement

The RP300x Series do not respond to transients that are fast duration/ low amplitude or long duration/ small amplitude. Figure 15 shows the relationship between the transient amplitude and duration needed to trigger a reset. Any combination of duration and amplitude above the curve generates a reset signal.

TECHNICAL NOTES

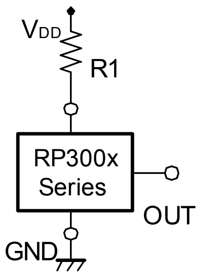

Figure 21.

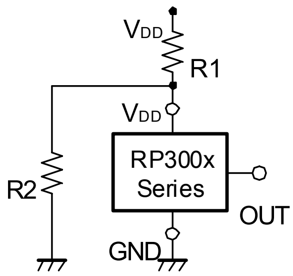

Figure 22.

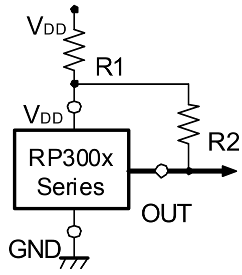

Figure 23.

- When using Nch open drain output products in circuits such as shown in Figure 21 and 22 with a large impedance (R1) between the V_{DD} pin and V_{DD}, detector threshold level would shift by voltage dropdown caused by the supply current of the IC itself. Released voltage may also shift and delay time for start-up might be generated by this usage.
- If CMOS output products are used in circuits such as shown in Figure 21 and 22, output level could be unstable by shoot-through current which is generated at detector threshold level or at released voltage level, so please avoid this style of use.
- Connections such as shown in Figure 23, may cause an unstable operation of all output types, so please avoid this style of use.

1. The products and the product specifications described in this document are subject to change or discontinuation of production without notice for reasons such as improvement. Therefore, before deciding to use the products, please refer to Ricoh sales representatives for the latest information thereon.
2. The materials in this document may not be copied or otherwise reproduced in whole or in part without prior written consent of Ricoh.
3. Please be sure to take any necessary formalities under relevant laws or regulations before exporting or otherwise taking out of your country the products or the technical information described herein.
4. The technical information described in this document shows typical characteristics of and example application circuits for the products. The release of such information is not to be construed as a warranty of or a grant of license under Ricoh's or any third party's intellectual property rights or any other rights.
5. The products listed in this document are intended and designed for use as general electronic components in standard applications (office equipment, telecommunication equipment, measuring instruments, consumer electronic products, amusement equipment etc.). Those customers intending to use a product in an application requiring extreme quality and reliability, for example, in a highly specific application where the failure or misoperation of the product could result in human injury or death (aircraft, spacevehicle, nuclear reactor control system, traffic control system, automotive and transportation equipment, combustion equipment, safety devices, life support system etc.) should first contact us.
6. We are making our continuous effort to improve the quality and reliability of our products, but semiconductor products are likely to fail with certain probability. In order to prevent any injury to persons or damages to property resulting from such failure, customers should be careful enough to incorporate safety measures in their design, such as redundancy feature, firecontainment feature and fail-safe feature. We do not assume any liability or responsibility for any loss or damage arising from misuse or inappropriate use of the products.
7. Anti-radiation design is not implemented in the products described in this document.
8. Please contact Ricoh sales representatives should you have any questions or comments concerning the products or the technical information.

RoHS Compliant
Halogen Free

For the conservation of the global environment, Ricoh is advancing the decrease of the negative environmental impact material.
After Apr. 1, 2006, we will ship out the lead free products only. Thus, all products that will be shipped from now on comply with RoHS Directive.
Basically after Apr. 1, 2012, we will ship out the Power Management ICs of the Halogen Free products only. (Ricoh Halogen Free products are also Antimony Free.)
