		SHEET 1 OF 9	

## Features

**Package:** 1.6x0.8x0.6mm(0603) standard package

**Feature of the device:** extremely wide viewing angle; ideal for backlighting and coupling in light guides

**Wavelength:** , 630nm(Red),470nm(Blue)

**Viewing angle:** Extremely Wide( 120° )

**Grouping parameter:** luminous intensity

**Assembly methods:** suitable for all SMT assembly methods

**Soldering methods:** IR reflow soldering

**Taping:** Package in 8mm tape on 7" diameter reel

## Package Dimensions

For reflow soldering

Unit: mm  
Tolerance: ±0.1

Reverse Current	Ir	Blue / Red	-	-	100	$\mu$ A	VR = 5V

Note :

- Luminous intensity is measured with a photo detector and filter combination that follows the CIE etc - response curve. And the equipment measured luminous intensity tolerance is  $\pm 5\%$ .
- $\theta 1/2$  is the off - axis angle at which the luminous intensity is half the axial luminous intensity.
- The dominant wavelength,  $\lambda d$  is derived from the CIE chromaticity diagram and represents the color of the device.
- Caution in ESD: Static Electricity maybe cause damages to the LED. It is recommend to use a wrist band or anti - electrostatic glove when handing the LED. All devices, equipment and machinery must be properly grounded.

## Cautions for use

### Over-current-proof

Customer must apply resistors for protection ,others slight voltage shit will cause big current change (Burn out will happen).

### Storage time

The operation of temperature and RH are : 5 °C ~35 °C,RH60%.

Once the package is opened , the products should be used within a week.

Otherwise , they should be kept in a damp proof box with descanting agent.

Considering the tape life , we suggest our customers to use our products within a year(from production date)

If opened more than one week in an atmosphere 5 °C ~35 °C , RH60% , they should be treated at 60 °C ±5 °C for 15 hrs.

COSMO-Innotek will not be held responsible for any damage to the user that may result from accidents or any other reasons during operation of the user's unit if use to exceed the absolute maximum ratings, or not keep the matters that demand special attention.

## Others

Soldering Heat Reliability

Available for Pb free soldering process

Please refer to the following figure :

## Soldering Iron

Basic spec is  $\leq 5\text{sec}$  when  $260^{\circ}\text{C}$ . If temperature is higher, time shorter (  $+10^{\circ}\text{C} \rightarrow -1\text{sec}$  ). Power dissipation of Iron should be smaller than 15W, and temperature should be controllable. Surface temperature of the device should be under  $230^{\circ}\text{C}$ .

## Rework

Customer must finish rework within 5sec under  $245^{\circ}\text{C}$ .

The head of Iron can not touch copper foil.

Twin-head type is preferred.
