Notice

- Take care not to cause interference due to wiring of IN⁻ and OUT1.
- In an application of connecting the CT pin to GND, lock protection and restart function are not effective.
- With reverse power - GND connection in the above application figure, the current restricted by the coil resistance flows from GND → OUT → coil → power supply. IC breakage does not occur if the current value is 500mA or less. If necessary, insert Di between V_{CC} and coil.
