NOTES:

- Each Channel
- Measured between PINS 2, 3, 19 and 20 shorted together and PINS 7, 8, 10, 12, 13, and 15 shorted together.
- Measured between PINS 9 and 10 shorted together, and PINS 11 and 12 shorted together.
- The t_{PLH} propagation delay is measured from the 6.5 mA point on the trailing edge of the input pulse to the 1.5 V point on the trailing edge of the output pulse.
- The t_{PHL} propagation delay is measured from the 6.5 mA point on the leading edge of the input pulse to the 1.5 V point on the leading edge of the output pulse.
- CM_H is the max. tolerable common mode transient to assure that the output will remain in a high logic state (i.e. $V_O > 2.0\text{ V}$).
- CM_L is the max. tolerable common mode transient to assure that the output will remain in a low logic state (i.e. $V_O < 0.8\text{ V}$).
- It is essential that a bypass capacitor (0.01 to 0.1 μF ceramic) be connected from PIN10 to PIN 7 and from PIN15 to PIN 12.
