

Silicon-Based Technology

Very High Speed and Low Power Memory

STATIC CMOS RAM

PRELIMINARY

Description:

The SB61L256BT-XG series products are 32,768-words by 8-bits static RAMs fabricated with advanced 8" wafer submicron CMOS technology. Using unique CMOS peripheral circuits and special poly-load 4-transistor memory cells, the SB61L256BT-XG series products exhibit very high-speed performance with single +3.3-volt power supply while requiring very low power and no clock or refreshing to operate. The SB61L256BT-XG is packed in a standard 28-pin 8mil*13.4mil TSOP-1, other packages are available upon request

Features:

- 32,768-word x 8-bit organization
- Single +3.3-volt power supply
- Fully static operation - no clock or refreshing required
- LVTTTL-compatible inputs and outputs
- Common I/O capability
- Low power consumption
 - Active: 100/80/60 mA (Max.)
 - Standby: 1 mA
- **Pb-free and Green package materials (as designated by G)**
- Very high speed access: 10/12/15 ns (Max.)
- 28-pin plastic 8mil*13.4mil TSOP-1 green package
- Output Enable ($\overline{\text{OE}}$) available for very fast access

Notes:

1. During this period, I/O pins are in the output state, so input signals of opposite phase to the outputs should not be applied.
2. The data output from D_{OUT} are the same as the data written to D_{IN} during the write cycle.
3. D_{OUT} provides the read data for the next address.
4. Transition is measured $\pm 500\text{mV}$ from steady state with $C_L = 5\text{pF}$. This parameter is guaranteed but not 100% tested.
