Description

The APU1117-18-HF-3 is a low-dropout, three-terminal fixed output regulator with minimum output current capability of 1A, specifically designed to provide a well-regulated supply for low-voltage IC applications in PC and other 1.8V logic supplies.

The APU1117-18-HF-3 is specifically designed to be stable with low-cost aluminum capacitors, and is guaranteed to have a drop-out voltage less than 1.3V at full load, making it ideal to provide well-regulated outputs of 1.8V from input supplies as low as 3.3V.

Note 1: Low duty-cycle pulse testing with Kelvin connections is required in order to maintain accurate data.

Note 2: Dropout voltage is defined as the minimum differential voltage between V_{IN} and V_{OUT} required to maintain regulation at V_{OUT} . It is measured when the output voltage drops 1% below its nominal value.

Pin Descriptions

PIN #	PIN SYMBOL	PIN DESCRIPTION
1	Gnd.	Ground pin. This pin must be connected to ground plane using a low-inductance short connection.
2	V _{OUT}	The output of the regulator. A capacitor of at least 10 μ F must be connected from this pin to ground to ensure stability.
3	V _{IN}	The input pin of the regulator. Typically a large storage capacitor is connected from this pin to ground to ensure that the input voltage does not sag below the minimum dropout voltage during the load transient response. This pin must always be 1.3V higher than V _{OUT} in order for the device to regulate properly.
