Notes:

- For models, MPM-04D-0503E and MPM-04D-1205E output voltage accuracy is specified as ±2% typical and ±5% Max.
- For models, MPM-04D-0503E and MPM-04D-1205E line regulation is specified as ±0.5% typical/±1.0% Max for V01 and ±1.0% typical/±3.0% Max for V02.
- For models, MPM-04D-0503E and MPM-04D-1205E load regulation is specified as ±0.5% typical/±1.0% Max for V01 and ±2.5% typical/±5.0% Max for V02.
- Output short circuit protection is provided by a "hiccup mode" circuit. The unit recovers automatically when the fault condition is removed.
- Overload protection is provided by a foldback circuit. Extended operation under an overload condition could damage the unit.
- Operation at under no load conditions will not damage these units. It is recommended that the minimum load values in the table above be used.
- It is recommended that a fuse be used on the input of a power supply for protection. For the MPM-04E series, a 1A/250 VAC slow blow should be used.
