

1.2V Low Voltage Operation, 150mA High Speed LDO Voltage Regulator

■ GENERAL DESCRIPTION

The XC6224 series is a high speed LDO regulator that features high accurate, low noise, high ripple rejection, low dropout and low power consumption. The series consists of a voltage reference, an error amplifier, a driver transistor, a current limiter, and a phase compensation circuit.

This IC is suitable for a local power supply placed in adjacent to the system logic LSI or others, because of low input voltage operation, using an ultra small package USPN-4B02 (0.75mm x 0.95mm) and stable operation with a small phase compensation capacitor (C_L) 0.47 μ F.

Also, this IC has fast transient response and high ripple rejection (70dB @ 1kHz).

The CE function enables the circuit to be in stand-by mode by inputting low level signal. In the stand-by mode, the series enables the electric charge at the output capacitor C_L to be discharged via the internal switch, and as a result the VOUT pin quickly returns to the Vss level.

The over current protection circuit is integrated and operates when the output current reaches current limit level.

■ APPLICATIONS

- Cell phones
- Digital still cameras
- Portable electronic devices
- Portable media players
- Bluetooth
- Wireless LAN
- Terrestrial digital TV tuners

■ FEATURES

Maximum Output Current	: 150mA
Operating Voltage Range	: 1.2V~3.6V
High Accuracy	: $\pm 1.5\%$ ($V_{OUT} = 1.25V \sim 3.0V$) : $\pm 20mV$ ($V_{OUT} = 0.8V \sim 1.20V$)
Low Power Consumption	: 33 μ A (TYP.)
Stand-by Current	: 0.1 μ A
High Ripple Rejection	: 70dB@1kHz
Dropout Voltage	: 210mV@150mA ($V_{OUT} = 2.8V$)
Protection Circuits	: Current Limiter : Short Circuit Protection
ON/OFF Control	: Active High : C_L Auto Discharge Function
Output Capacitor	: Low ESR Capacitor
Operating Ambient Temperature	: $-40^\circ C \sim +85^\circ C$
Packages	: USPN-4B02 : SSOT-24 : SOT-25
Environmentally Friendly	: EU RoHS Compliant, Pb Free

(*)1 When $V_{OUT(T)} \leq 1.20V$, the output voltage accuracy is $\pm 20mV$.
When $V_{OUT(T)} \geq 1.25V$, the output voltage accuracy is $\pm 1.5\%$.

■ OPERATIONAL EXPLANATION

The voltage divided by resistors R1 & R2 is compared with the internal reference voltage by the error amplifier. The P-channel MOSFET which is connected to the VOUT pin is then driven by the subsequent output signal. The output voltage at the VOUT pin is controlled and stabilized by a system of negative feedback. The current limit circuit and short circuit protection operate in relation to the level of output current. Further, the IC's internal circuitry can be shutdown via the CE pin signal.

<Low ESR Capacitor>

The XC6224 needs an output capacitor C_L and a built-in phase compensation circuit for phase compensation. In order to ensure the stable phase compensation, please place an output capacitor C_L of $0.47 \mu F$ or bigger at the VOUT pin as close as possible. For a stable power input, please connect an input capacitor C_{IN} of $0.47 \mu F$ between the VIN pin and the VSS pin.

<Current Limiter, Short-Circuit Protection>

The protection circuit operates as a combination of an output current limiter and fold-back short circuit protection. When load current reaches the current limit level, the output voltage drops. As a result, the load current starts to reduce with showing fold-back curve. The output current finally falls at the level of 35mA when the output pin is short-circuited.

<CE Pin>

The IC's internal circuitry can be shutdown via the signal from the CE pin. In shutdown mode, output at the VOUT pin will be pulled down to the VSS level in the XC6224B series. When the CE pin is open, the output voltage becomes undefined state in the XC6224A series because of a high active and no pull-down. Although the CE pin is equal to CMOS input configuration, the CE pin input current which flows into a pull-down resistor will increase in the XC6224B series.

■ NOTES ON USE

1. For temporary, transitional voltage drop or voltage rising phenomenon, the IC is liable to malfunction should the ratings be exceeded.
2. Torex places an importance on improving our products and its reliability.
However, by any possibility, we would request user fail-safe design and post-aging treatment on system or equipment.
3. Where wiring impedance is high, operations may become unstable due to the noise and/or phase lag depending on output current. Please strengthen VIN and VSS wiring in particular.
4. The input capacitor C_{IN} and the output capacitor C_L should be placed to the IC as close as possible with a shorter wiring.

E	2.20	-	2.25	-	Z	-	-	-	-

④⑤ represents production lot number

1~09, 0A~0Z, 11~9Z, A1~A9, AA~Z9, ZA~ZZ repeated.

(G, I, J, O, Q, W excluded.)

* No character inversion used.

■ MARKING RULE (Continued)

● SSOT24 (with bar)

① represents type of regulator and combination of output voltage

MARK				PRODUCT SERIES
OUTPUT VOLTAGE 0.1V INCREMENTS		OUTPUT VOLTAGE 0.05V INCREMENTS		
VOLTAGE =0.8~2.4V	VOLTAGE =2.5~3.0V	VOLTAGE =0.85~1.95V	VOLTAGE =2.05~2.95V	
A	F	F	Z	XC6224A****-G
H	P	P	R	XC6224B****-G

② represents output voltage

presents output voltage

MARK	OUTPUT VOLTAGE (V)					MARK	OUTPUT VOLTAGE (V)			
	XC6224A/B			XC6224A			XC6224A/B		XC6224B	
0	0.80	0.85	-	2.05	-	F	-	-	-	-
1	0.90	0.95	-	2.15	-	H	-	-	-	-
2	1.00	1.05	-	2.25	-	K	-	-	-	-
3	1.10	1.15	-	2.35	-	L	-	-	-	-

D	2.10	2.15	Y	-	-
E	2.20	2.25	Z	-	-

③ represents production lot number

0~9, A~Z repeated.

(G, I, J, O, Q, W excluded.)

* No character inversion used.

1. The products and product specifications contained herein are subject to change without notice to improve performance characteristics. Consult us, or our representatives before use, to confirm that the information in this datasheet is up to date.
2. We assume no responsibility for any infringement of patents, patent rights, or other rights arising from the use of any information and circuitry in this datasheet.
3. Please ensure suitable shipping controls (including fail-safe designs and aging protection) are in force for equipment employing products listed in this datasheet.
4. The products in this datasheet are not developed, designed, or approved for use with such equipment whose failure of malfunction can be reasonably expected to directly endanger the life of, or cause significant injury to, the user.
(e.g. Atomic energy; aerospace; transport; combustion and associated safety equipment thereof.)
5. Please use the products listed in this datasheet within the specified ranges.
Should you wish to use the products under conditions exceeding the specifications, please consult us or our representatives.
6. We assume no responsibility for damage or loss due to abnormal use.
7. All rights reserved. No part of this datasheet may be copied or reproduced without the prior permission of TOREX SEMICONDUCTOR LTD.
