BRIGHT & SUPERBRIGHT LEDs

The electrical specifications shown are determined at a basic temperature of 25°C. LED circuit is isolated and requires external power source. If the source voltage exceeds the rated voltage, a ballast resistor is required.
 Base of AT634 and AT636 is Black for 5V, Light Blue for 12V and Gray for 24V.

BALLAST RESISTOR CALCULATION FOR LEDS

If the source voltage is greater than the rated voltage of a lamp or LED, a ballast resistor must be connected in series with the lamp. The following circuit diagram and formula will assist in calculating the value of the required ballast resistor.

$$R = \frac{E - V_F}{I_F}$$

Where: R = Resistor Value (Ohms)
 E = Source Voltage (V)
 V_F = Forward Voltage (V)
 I_F = Forward Current (A)

ASSEMBLY INSTRUCTIONS

1. Remove mounting nut.

2. Remove flange and red o-ring from housing. There are two o-rings in this assembly: one is red, one is orange.

3. Install LED.

AT634, AT636

Align D-flat on LED with PN on switch for appropriate polarity and insert LED into base.

AT628

Align D-flat on LED with PN on switch for appropriate polarity and insert LED into base.

AT625

The larger metal part within the LED represents the cathode (-). Align LED for appropriate polarity and insert LED into base.

4. Align tabs (B) on both sides of actuator with the projections (A) inside of the housing and push actuator firmly down to snap in.

5. Install the red o-ring which was removed in step 2 at the inside bottom of the bezel.

6. Align tab inside of the bezel with keyway on housing and bring bezel back into its original position.

7. Before installing into panel, make sure that the orange o-ring is present at the back of the bezel. Align keyway on bezel with tab in panel and push switch all the way into the panel.

8. Attach mounting nut behind panel and tighten. Make sure that bezel and actuator fit properly and that there is no space between bezel and panel. Do not overtighten. Mounting torque: 0.785Nm (6.95 lb•in) maximum. Optional socket wrench AT106 available.
