CMOS IC

## 2A LOW DROPOUT REGULATOR WITH ENABLE

### DESCRIPTION

The UTC LR18120 is a positive voltage regulator with high performance. It has low dropout voltage and low input voltage, besides its output voltage can be fixed at 1.2V, 1.5V, 1.8V, or 2.5V depending on internal feedback resistors or ADJ (not connected to the ground) with external feedback resistors. The input voltage of UTC LR18120 can be low to 1.4V. There are two additional pin in the LR18120. One is EN pin and the other is POK pin.

The UTC LR18120 is specially made for applications with low input voltage, low dropout voltage, and low output voltage which is almost the same as the input voltage. Typical applications include motherboards, notebooks, set top boxes, network cards and peripheral cards.

## PIN CONFIGURATION

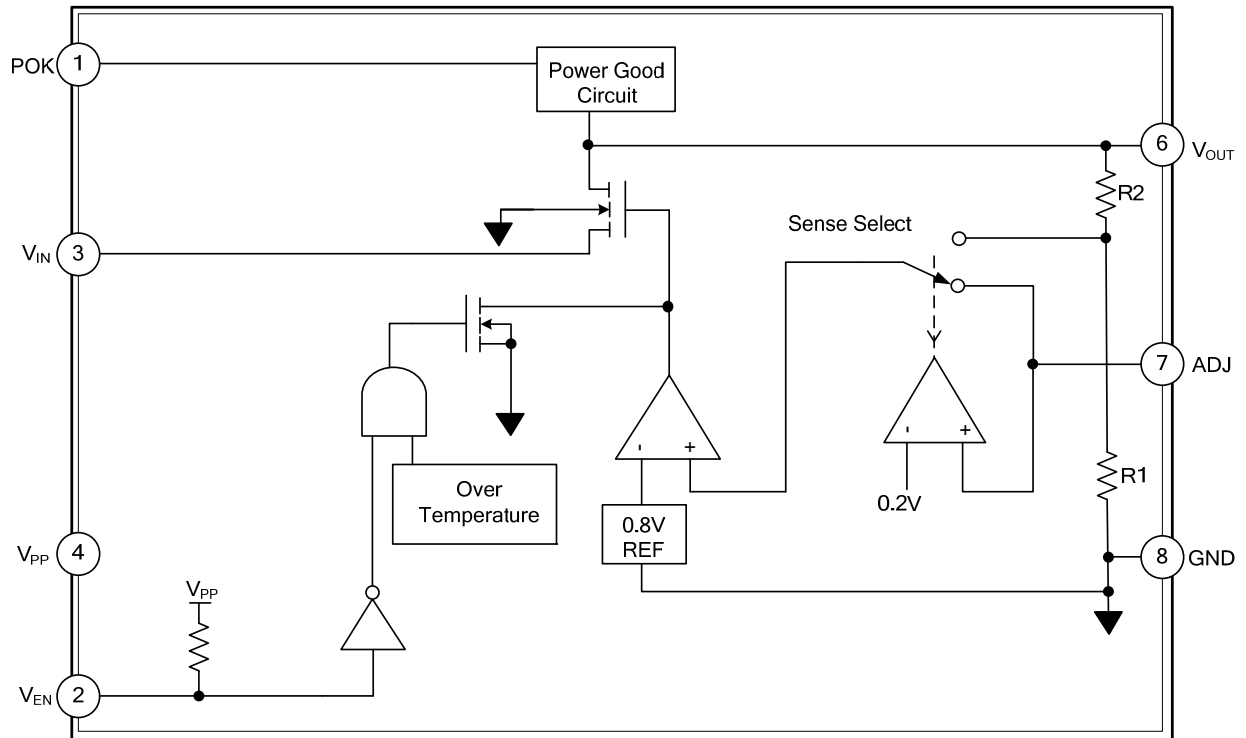

## PIN DESCRIPTION

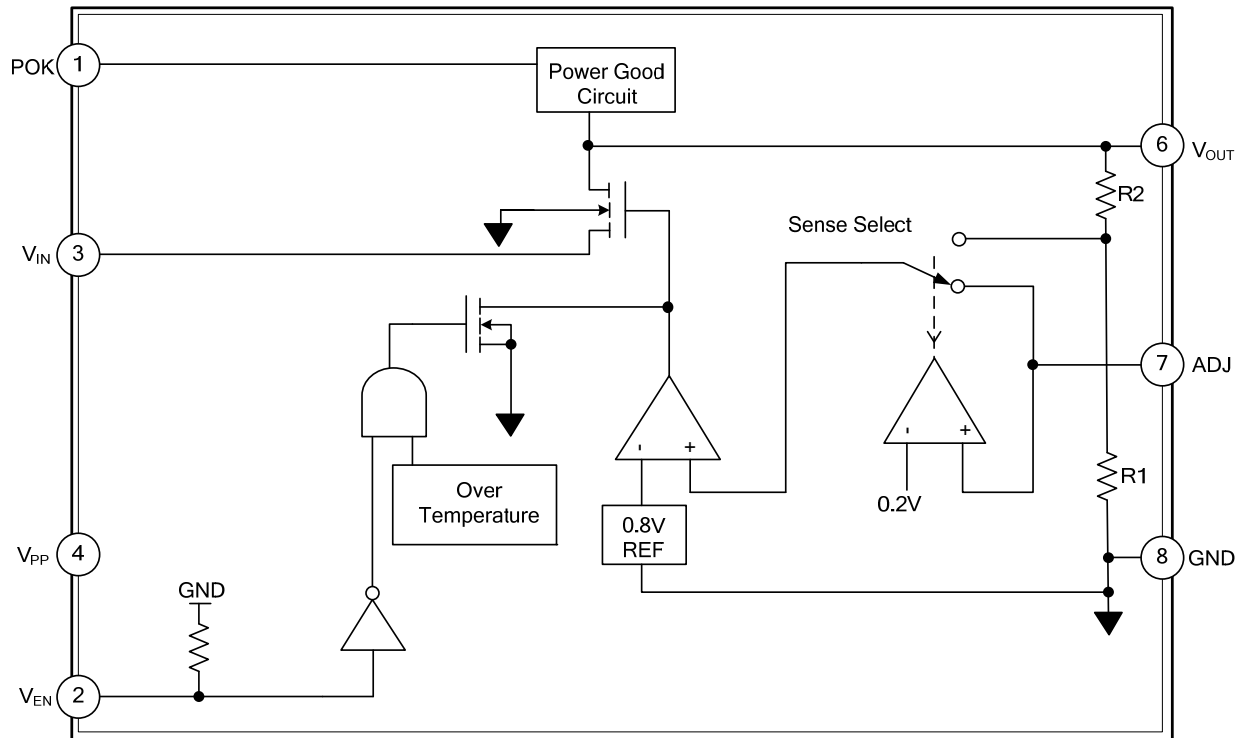

PIN NO.	PIN NAME	DESCRIPTION
1	POK	This pin will Indicate high under this situation: $V_O$ reaches 92% of its rating voltage. Open-drain output.
2	$V_{EN}$	The enable control Input pin. As while as this pin's voltage falls below 0.4V ,the LR18120 will stop working. When there's nothing connected with this pin, for active High version, the device will be enabled, for active Low version, the device will be shutdown
3	$V_{IN}$	The pin of input voltage. Placing large capacitance closely to this pin is necessary. There should be connected a 10 $\mu$ F ceramic capacitor.
4	$V_{PP}$	This pin is for input voltage to control circuit.
5	NC	Connected nothing.
6	$V_{OUT}$	The voltage output pin.
7	ADJ	When this pin connected to the ground, $V_{OUT}$ will be set by the internal feedback resistors. Otherwise, if using external feedback resistors to decide the $V_{OUT}$ , $V_{OUT} = 0.8(R1+R2)/R2$ Volts.
8	GND	Ground.
