

LR2125

LINEAR INTEGRATED CIRCUIT

300mA SELECTABLE FIXED/ADJUSTABLE LOW DROPOUT LINEAR REGULATOR

DESCRIPTION

As a low dropout linear regulator, the UTC **LR2125** only needs low input voltage (2.8~6V) and can deliver current to 300mA for setting the output voltage.

The UTC **LR2125** is an ideal for being used in such battery-powered equipments notebook, personal computer and cellular phone. Its typical dropout voltage is 230mV at loading current 300mA.

For setting the output voltage, the UTC **LR2125** has two output voltage operation modes: fixed mode senses the output voltage on V_{OUT} , ADJ mode needs two resistors as a voltage divider.

To protect itself against current over-loads and over temperature, the **LR2125** has current limit and thermal shutdown functions.
