This Swissbit module family is industry standard 184-pin 8-byte Double Date rate synchronous SDRAM Dual-In-line Memory Modules (DIMMs), which are organized as x64 high speed memory arrays designed for use in non-parity applications. DIMMs are assembled in TSOP Technology. The passive devices and the EEPROM are SMD components.
The DIMM use serial presence detects (SPD) implemented via serial EEPROM using the two-pin-I^2C protocol. The first 128 bytes are utilized by the DIMM manufacturer and the second 128 bytes are available to the end user.

All Swissbit DIMMs provide a high performance, flexible 8-byte interface in a 133.35mm long footprint.

All modules of the extended temperature grade have seen special tests during the manufacturing process to ensure proper operation according to the field of operation as stated in the environmental conditions.
