The HMI5043T is our smallest widescreen graphic operator.

The bright 4.3" TFT display supports up to 65K colors and has a higher resolution (480 x 272 pixels) than most 6" screens. This model is designed for applications that require a rugged compact operator interface with low power. The HMI5043T operates on 24 VDC and has a power saving mode that reduces current to the display to save energy. This industrial terminal requires only 1.5" of depth when mounted to a panel.

As part of our popular Graphic HMI Series, the HMI5043T can communicate over serial and ethernet to over 80

major manufactures of PLCs and motion controllers. This HMI is very easy to configure using our EZware software with pick-and-place objects including bar graphs, meters, text objects, numeric entry, trend graphs, and alarms. The built-in simulation feature means you can easily test and modify your project before downloading to the HMI5043T.

Perhaps the best feature of the HMI5043T is the low cost. You now have the option of using an intuitive color graphics touchscreen

in applications that formerly required a text-based display due to budget constraints.

The HMI5043T is reliable, affordable, loaded with features, and easy to use. It is another smart solution from the operator interface experts.
