# **Remote Reset Rocker Switch**

#### Minimum size class in the industry Rocker switch with reset function

- Zero standby power by Reset function.
- High inrush-current durability. Conforming to TV-8 rating. (Inrush 117A)
- Model variation for Micro loads.
- Model variation of micro load and high capacity combination. (DPST) It is able to operate micro load and high capacity load at the same time.
- Contact gap of 3 mm minimum.
- UL and cUL standard approved, Conforming to EN standards.
- · RoHS Compliant.

\* There are 2 kinds of main models A8GS. (Delay OFF Function model and Remote Reset model) With regard to the models with Delay OFF Function, please refer to A8GS-T datasheet.

Note: 1. [V] is shown at the end of model name for TV-8 approved models. (Example: A8GS-P1185V, A8GS-C1185V, A8GS-D1185V)

<sup>2.</sup> TV-8 approved model is only for Power switch circuit.

<sup>\*</sup> These models are without reset function, it has same function with standard Rocker switch.

### Operation

#### **Remote Reset Function**

Button is operated for turning OFF of Power and Micro load contact terminal by applying external signal to coil.

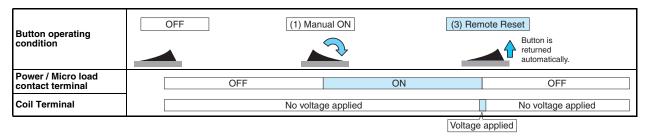

#### Manual Operation

Power and Micro load contact terminal are operated to turn ON/OFF by manual, same as standard Rocker switch.

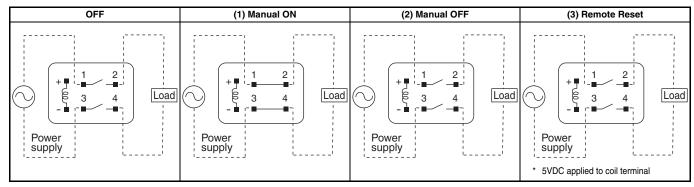

#### **Remote Reset Function Operation**

It is able to turn OFF Power and Micro load contact terminal from manual ON condition by applying voltage to coil.

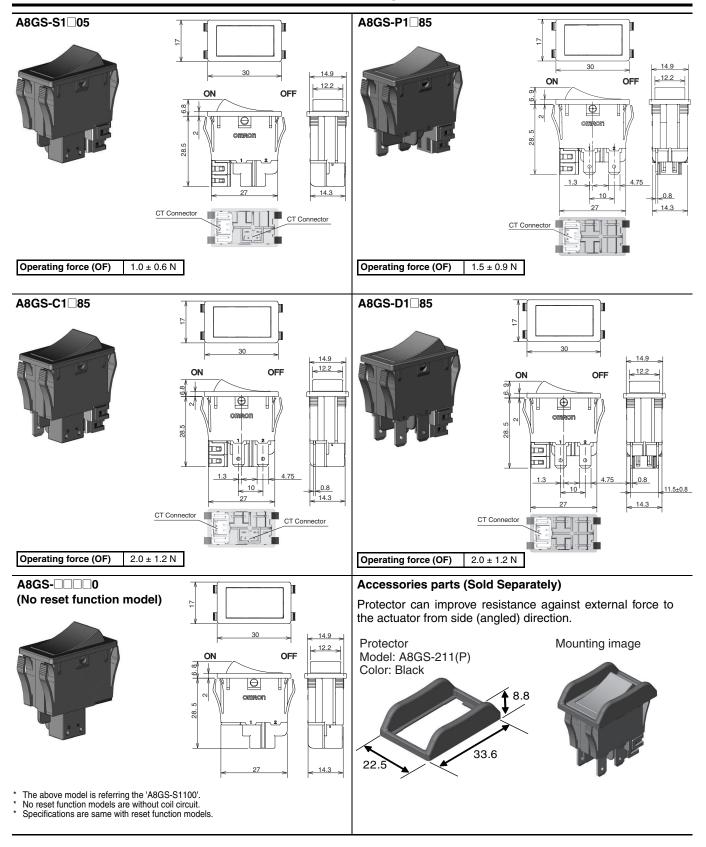

### Switch circuit and operating condition

**Note:** The above circuit is referring to the 'A8GS-D\(\sigma\)\(\sigma\)\(\sigma\)\(\model\).

### **Dimensions (Unit: mm) / Operating Characteristics**

- Note: 1. Unless otherwise specified, a tolerance of  $\pm$  0.4 mm applies to all dimensions.
  - 2. When initial operation or operation after reset, operating force is increased, due to switch structure.
  - 3. Solder terminals model has different hole shape, compare with Quick-connect terminals. Outline and characteristics are same.
  - 4. TV-8 approved models are same outline and characteristics with standard models.

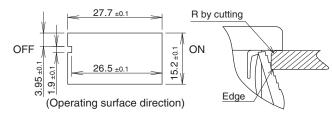

#### **Panel Cutout**

Panel thickness: 0.8 to 2.3 mm

Panel cutout design is for prevention of false insertion. Please be careful about the direction of the protrusion.

The rollover of the panel shall be on the front face. And panel back side shall be Edge shape by processing.

Note: Recommendation panel material is "SPCC", however, in case of soft material or Panel back side shape is not edge, mounting strength may down. Please check and try by actual mounting panel and set the Panel thickness and hole dimension.

### **Precautions**

#### ∕!\ WARNING

Do not wire the switch or touch any terminal of the Switch while power is being supplied. Or it may result in electric shock.

Use the switch within the rated voltage and current ranges, otherwise the switch may have deteriorated durability radiate heat, or burn out. This particularly applies to the instantaneous voltages and currents when switching.

### ■ Correct Use

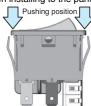

#### Mounting

Easy to mount by snap fitting.

Do not impose excessive force on switch at the time of panel mounting.

Do not detach the switch after installed. Otherwise, the holding strength may be loose.

Apply the force to housing when installing to panel. Do not apply the force to the button (rocker) part when installing to the panel.

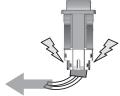

#### Wiring

Confirm the size of the receptacles and be sure to connect them firmly.

Use an appropriate wire allowable to carry current.

Be sure that there is no mechanical stress on terminals and coil terminals. Otherwise, the switch may malfunction and/or damaged.

(Example: Too strong wiring)

Take appropriate insulation distance between switch terminal and other metal parts after wiring.

Coil has polarity, please confirm polarity when wiring.

Do not apply continuous voltage more than 10 seconds at any time. Otherwise, insulation deterioration may occur by heat of coil. Please consider the circuit design.

Reverse voltage may cause of accurate discrete semiconductor devices. In case of controlling by accurate discrete semiconductor devices, Please consider the circuit design. (Example : add the surge absorbing circuit)

In case of manual soldering, soldering time is max 4 sec by soldering iron (Max 350  $^{\circ}\text{C}$  at the iron tip) and do not add the stress to terminals.

In case of touching the soldering iron to the root of terminals, it may cause Housing parts melt

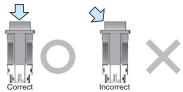

#### Handling

Do not apply excessive operating force to the switch.

Do not drop or apply the excessive shock.

Otherwise the switch may be damaged or deformed.

Do not impose force to operating part from an angle, Otherwise the switch may be damaged or deformed.

#### Environment for storage and use

To prevent the terminals color change and others while storage, Do not keep for a long term in the following conditions.

- (1) High temperature, high humid environment
- Corrosive gas
- The place where the direct rays of the sun
- The place where the sea breeze Environmental with a sudden temperature change

This switch is not sealed to prevent from entering dust and liquid.Do not use under dust and liquid condition.

Switch shall not be icing or condensation.

Strong magnetic field may cause malfunction.

Check function is recommended under practical use conditions.

#### **Using Micro Loads**

In case of using the switch under the micro loads, please refer the Minimum applicable load and set the load more than minimum applicable load.

Even when using micro load within the operating range, if inrush current occurs, it may increase contact wear and so deteriorate durability. Therefore, insert a contact protection circuit where necessary.

The minimum applicable load is the L-level reference value.

This value indicates the malfunction reference level for the reliability level of 60 %. ( $\lambda$  60)

The equation,  $\lambda~60=0.5~x~10^{-6}$  /operations indicates that the estimated malfunction rate is less than 1/2,000,000 operations with a reliability level of 60 %.

#### **RoHS Compliant**

The "RoHS Compliant" designation indicates that the listed models do not contain the six hazardous substances covered by the RoHS Directive.

Reference: The following standards are used to determine compliance for the six substances

> Lead 1,000 ppm max. Mercury 1,000 ppm max. Cadmium · 100 ppm max. Hexavalent chromium: 1,000 ppm max. **PBB** 1,000 ppm max. **PBDE** 1,000 ppm max.

### ■ Usage Example

Saving energy by cutting standby power. Saving energy by preventing forgetting turn OFF main power. Turning OFF main power by remote.

Turning OFF main power of many equipments at the same time.
