Description:

The MwT-1789LN is a low noise GaAs MESFET device in low cost SOT89 package that is ideally suited for low noise/high dynamic range applications. The applications include 2G, 2.5G, and 3G wireless infrastructure standards, such as GSM, TDMA, CDMA, Edge, cdma2000, WCDMA, TD-SCDMA, and UMTS base stations. This product is also ideal for high data rate wireless LAN infrastructure applications, such as high QAM rate 802.11 WiFi and 802.16 WiMax base stations and APs (Access Points). In addition, the product can be used for point-to-point microwave communications links. The third order intercept performance of the MwT-1789LN is excellent, typically 18 dB above the 1 dB power gain compression point. The noise figure is as low as 0.8 dB at 900 MHz. The chip is produced using MwT's proprietary high linearity device design. It also uses MwT reliable metallization process. All chips are passivated using MwT's patented "Diamond-Like Carbon" process for increased durability.
