## Cloud Archive and Backup

Public ● Private

*Is Your **Archive and Backup Plan** More of a **Maze** Than a **Strategy**?*

TeraNimbus™ Archive and Backup is a premium cloud-based service built on the idea that long-term data storage should be just that, long term. It is for this reason that TeraNimbus uses industry-leading archive technology in its storage architecture. The system uses patented Blu-ray technology for 50+ year data integrity. This same technology has previously only been available to corporate and government agency clients as an onsite offering. Hie Electronics is now launching its award-winning storage technology in a cloud-based format for those customers that want an automated, hassle free, cloud-based, long-term archive and backup platform.

If your data is truly important, then stop taking chances with it. Move your data to a cloud-based platform that provides long-term data integrity, a user-friendly software interface and the peace of mind that it is truly safe, secure and available when you need it for business reasons, legal, compliance and other regulatory matters.

TeraNimbus can be customized based on the requirements of the user and can be configured as an onsite private cloud, hybrid cloud, or an offsite data-center-based cloud archive and backup platform. Do not waste another day wondering if your long-term data strategy will work when you need it. Our technical archive and storage experts can talk to you about your storage needs and how we can configure your cloud service to better maximize your IT budget, staffing and long-term data security.

# ***ARE YOU SURE YOUR DATA WILL BE THERE WHEN YOU NEED IT?***

## **Benefits Over Other Cloud Providers**

- 100% data integrity.
- Easy access through web enabled client.
- Deployed as account specific drop box; could not be easier.
