

SY02-MFTC

Date: Aug 4,2005

- **INTRODUCTION**

The SY02-MFTC is a high frequency crystal-based PLL synchronizer designed as a module level subsystem for easy incorporation into telecommunication equipment SONET/SDH/ATM/DWDM. Supports multiplexing of up to 4 independent references translated into one single jitter free frequency source.

- **FEATURES**

- Low jitter output from intrinsically low jitter VCXO ;
- User Selected one LVCMOS/HCMOS Input frequency **Up to 77.76MHz**
- One frequency LVCMOS/HCMOS output with enable/disable function **Up to 77.76MHz** (pre-select frequency value – upon order)
- Alarms status and VCXO monitor;
- The unit changes timing modes in response to external events;
- J-TAG service port for re-programming and servicing;
- 3.3V DC power supply
- Small dimensions: 0.8" x 1.00"

- **APPLICATIONS**

- ATM
- SDH
- PDH
- SONET
- DWDM
- FEC
- Other telecommunication equipment.

• DESCRIPTION

The SY02-MFTC is a High Frequency Phase Lock Loop has been designed as a module level subsystem for easy incorporation into telecommunication equipment. The module generates the high frequency (up to 200MHz) output from a low jitter VCXO (Crystal Based Oscillator). The output can be disabled externally by setting OUTEN pin high. The SY02-MFTC can be locked to a user defined input reference signal **(from 8KHz to 77.76MHz...for options please see table)**.

Frequency selection could be simultaneously achieved of up to 4 independent sources while combining the module with an external MUX. RAMI's SY02-MFTC device could be used as a frequency translator in PLL circuits or frequency regenerator device in cases where jitter cleaning and filtering is required. The module has a fast locking time and tolerates reference inputs with different duty cycles. The loop bandwidth is optimized in accordance with the VCXO used and

required output performance. The ALARM output signals monitor the status of the phase lock loop and indicates LOL (Loss of Lock Detect). If the reference REF IN is absent, the SY02-MFTC will automatically switch to free run mode and LOL will show "0" logic level. The SMD package dimensions are 0.80"x1.00" inch and powered by a supply of 3.3V.
