

AC-KB01

Wyki, wireless USB keyboard, QWERTY

Barco's medical keyboard allows users to define periods when the keyboard must be sterilized - an LED is lit to remind hospital and nursing staff when this is due. This visual reminder assists with cleaning regimes to help stop the spread of MRSA, E.coli and other hospital infections.

The keyboard has been tested with hospital-approved germicidal sprays, wipes and alcohol-based compounds. Barco's AC-KB01 keyboard features:

- Hot swappable automatic pairing of keyboard with docking station (wireless only)
- All-in-one design and smooth contoured buttons for easy cleaning
- Keyboard base contains antimicrobial additive
- Disinfect feature to deactivate keys when cleaning
- 6 hour battery life with smart docking station for recharging
- Standard USB interface
- Wireless connection with 15m range - uses RF signals not susceptible to interference
- Innovative mounting brackets
- Numeric keypad for improved data entry
- Large track pad for ease of use

This keyboard is only compatible with the AC-AR01 and AC-AR02 arms and needs to be used together with a Wyki standard bracket or a Wyki flip
