#### 12 GHz bandwidth

The PicoScope 9200A oscilloscopes uses sequential sampling technology to measure fast repetitive signals without the need for expensive realtime sampling hardware. Combined with an input bandwidth of 12 GHz, this enables acquisition of signals with rise times of 50 ps or even faster. Precise timebase stability and accuracy, and a resolution of 200 fs, allow characterization of jitter in the most demanding applications.

The scopes are designed with Pico Technology's PC Oscilloscope architecture to create a compact, lightweight instrument that can be easily carried around with your laptop.

ifan Ma

## 10 GHz prescaled trigger

The PicoScope 9200A scopes have a built-in high-frequency trigger with frequency divider. Its typical bandwidth of up to 10 GHz allows measurements of microwave components with extremely fast data rates.

#### 1 GHz full-function direct trigger

The scopes are equipped with a built-in direct trigger for signals up to 1 GHz repetition rate without using additional trigger units.

## Built-in 2.7 Gb/s clock recovery

The PicoScope 9211A, 9221A, and 9231A have a dedicated clock-recovery trigger input for serial data from 12.3 Mb/s to 2.7 Gb/s.

#### Pulse parameter measurements

Maximum, Minimum, Peak-Peak, Top, Base, Amplitude, Middle, Mean, DC RMS, AC RMS, Area, Cycle Middle, Cycle Mean, Cycle DC RMS, Cycle AC RMS, Cycle Area, Positive/Negative Overshoot, Period, Frequency, Positive/ Negative Width, Rise/Fall Time, Positive/ Negative Duty Cycle, Positive/Negative Crossing, Burst Width, Cycles, Time at Maximum/Minimum, Delay, Gain, FFT Magnitude, FFT Delta Magnitude, THD, FFT Frequency, FFT Delta Frequency

The PicoScope 9200A scopes guickly measure over 40 pulse parameters, so you don't need to count graticules or estimate the waveform's position. Up to ten simultaneous measurements or four statistics measurements are possible. The measurements conform to the IEEE standards.

# TDR/TDT analysis

The PicoScope 9211A and 9231A are supplied with a calibrated timedomain reflectometry (TDR) and time-domain transmission (TDT) accessory kit. This is used with the unit's built-in step generators to measure impedance discontinuities in circuit boards, cables and transmission lines, connectors and IC packages, with a horizontal resolution of 200 fs. The results can be displayed as volts, ohms or reflection coefficient (rho) against time or distance.

The TDR/TDT scopes also include all the features of the PicoScope 9201A, such as eye diagram analysis and mask testing.

## - Powerful mathematical analysis

Mathematical functions			
A + B	- A		
A – B	A		
Α×Β	log(A)		
Α÷Β	dA/dt		
	∫A.dt		
	interpolate(A)		
	smooth(A)		

The PicoScope 9200A scopes support up to four simultaneous mathematical combinations and functional transformations of acquired waveforms.

You can select any of the mathematical functions to operate on either one or two sources. All functions can operate on live waveforms, waveform memories or even other functions.

#### Histogram analysis

A histogram is a probability graph that shows the distribution of acquired data from a source within a user-definable window. The information gathered by the histogram is used to perform statistical analysis on the source.

Histograms can be constructed on waveforms on either the vertical or horizontal axes. The most common use for a vertical histogram is measuring and characterising noise, while the most common use for a horizontal histogram is measuring and characterizing jitter.

## Eye-diagram analysis

The PicoScope 9200A scopes quickly measure more than 30 fundamental parameters used to characterize non-return-to-zero (NRZ) signals and return-to-zero (RZ) signals. Up to four parameters can be measured simultaneously, with statistics also shown.

The measurement points and levels used to generate each parameter can be shown dynamically.

Eye diagram analysis can be made even more powerful with the addition of mask testing, as described below.

#### Mask testing

For eye-diagram masks, such as those specified by the SONET and SDH standards, the PicoScope 9200A scopes support on-board mask drawing for visual comparison. There is a library of built-in masks (listed in the column on the left), and custom masks can be automatically generated and modified using the graphical editor. A specified margin can be added to any mask.

The display can be grey-scaled or colour-graded to aid in analyzing noise and jitter in eye diagrams. There is also a statistical display showing the number of failures in both the original mask and the margin.

#### Optical-to-electrical converter

The PicoScope 9221A and 9231A have a built-in 8 GHz optical electrical converter. This allows analysis of optical signals such as SONET/SDH OC1 to OC48, Fibre Channel FC133 to FC4250, and G.984.2. The converter input accepts both single-mode (SM) and multimode (MM) fibers and has a wavelength range of 750 to 1650 nm.

A selection of Bessel-Thomson filters can be purchased separately for use with specific optical standards (see back page).

#### FFT analysis

All PicoScope 9000 Series oscilloscopes can perform up to 2 Fast Fourier Transforms of input signals using a range of windowing functions. FFTs are useful for finding crosstalk problems, finding distortion problems in analog waveforms caused by non-linear amplifiers, adjusting filter circuits designed to filter out certain harmonics in a waveform, testing Windowing functions Rectangular Hamming Hann Flat-top

Blackman- Harris Kaiser-Bessel

impulse responses of systems, and identifying and locating noise and interference sources.

#### Pattern sync trigger and eye line mode

The PicoScope 9211A, 9221A and 9231A can internally generate a pattern sync trigger derived from bit rate, pattern length, and trigger divide ratio. This enables it to build up an eye pattern from any specified bit or group of bits in a sequence.

Eye line mode works with the pattern sync trigger to isolate any one of the 8 posssible paths, called eye lines, that the signal can make through the eye diagram. This allows the instrument to display averaged eye diagrams showing a specified eye line.

ActiveX command categories

Header System Channels Timebase Trigger Acquisition Display Save/Recall Markers Measurements (Time Domain) Measurements (Spectrum) Limit Tests Mathematics FFT Histogram Mask Testing Eye Diagrams Utilities Waveforms The PicoScope 9000 software can be operated as a standalone oscilloscope program and as an ActiveX control. The ActiveX control conforms to the Windows COM model and can be embedded in your own software. Programming examples are provided in Visual Basic (VB.NET), LabVIEW and Delphi, but any programming language or standard that supports the COM standard can be used, including JavaScript and C.

A comprehensive Programmer's Guide is supplied that details every function of the ActiveX control.

The SDK can control the oscilloscope over the USB or the LAN port.

ActiveX command types Execution On/off On/off group Selector Integer Float Data

# Specifications

# PicoScope 9200A PC Sampling Oscilloscopes

Channels (vertical)	
Number of channels	2 (simultaneous acquisition)
Bandwidth	Full: DC to 12 GHz
	Narrow: DC to 8 GHz
Pulse response rise time	10% to 90%, calculated from Tr = $0.35/BW$
	Full bandwidth: 29.2 ps
	Narrow bandwidth: 43.7 ps
RMS noise, maximum	Full bandwidth: 2 mV
	Narrow bandwidth: 1.5 mV
	With averaging: 100 $\mu$ V system limit
Scale factors (sensitivity)	2 mV/div to 500 mV/div. 1-2-5 sequence and 0.5% fine increments.
Nominal input impedance	$(50 \pm 1) \Omega$
Input connectors	SMA (F)
Timebases	
Timebases	10 ps/div to 50 ms/div (main, intensified, delayed, or dual delayed)
Delta time interval accuracy	±0.2% of of delta time interval ±15 ps
Time interval resolution	200 fs minimum
Trigger	
	Extended in a state of the second distance in the second distance of the second state
Trigger sources	External direct trigger, external prescaled trigger, internal clock trigger, clock recovery trigger (not 9201A)
Direct trigger bandwidth and sensitivity	DC to 100 MHz : 100 mV p-p
	100 MHz to 1 GHz; increasing linearly from 100 mV p-p to 200 mV p-p
Prescaled trigger bandwidth and sensitivity	1 to 7 GHz: 200 mV p-p to 2 V p-p
	7 to 8 GHz: 300 mV p-p to 1 V p-p
	8 to 10 GHz typical: 400 mV p-p to 1 V p-p
Trigger RMS jitter, maximum	4 ps + 20 ppm of delay setting
Acquisition	
ADC resolution	16 bits
Digitizing rate	DC to 200 kHz maximum
Acquisition modes	Sample (normal), average, envelope
Data record length	32 to 4096 points maximum per channel in x2 sequence
	52 to 10/0 points maximum per charmer in x2 sequence
Display	
Display resolution	Variable
Display style	Dots, vectors, variable or infinite persistence, variable or infinite grey scaling, variable or infinite color grading
Measurements and analysis	
Marker	Vertical bars, horizontal bars (measure volts) or waveform markers (x and +)
Automatic measurements	Up to 40 automatic pulse measurements
	Vertical or horizontal
Histogram	
Mathematics	Up to four math waveforms can be defined and displayed
FFT	Up to two FFTs simultaneously, with built-in filters (rectangular, Nicolson, Hann, flat-top, Blackman- Harris and Kaiser-Bessel)
Eye diagram	Automatically characterizes NRZ and RZ eye patterns. Measurements are based on statistical analysis of the waveform.
Mask test	Acquired signals are tested for fit outside areas defined by up to eight polygons. Standard or user-defined masks can be selected.
Clock recovery and pattern sync trigger (not 9201)	s)
Clock recovery sensitivity	12.3 Mb/s to 1 Gb/s : 50 mV p-p
	1 Gb/s to 2.7 Gb/s: 100 mV p-p
	Continuous rate.
Pattorn suna triagon	10 Mb/s to 8 Gb/s with pattern length from 7 to 65,535 max.
Pattern sync trigger	
Recovered clock RMS trigger jitter, maximum	1 ps + 1.0% of unit interval
Maximum safe trigger input voltage	$\pm 2 V (DC + peak AC)$
Trigger input connector	SMA (F)
Signal generator output (9211A and 9231A)	
Rise/fall times	100 ps (20% to 80%) typical
Modes	
1 lodes	Step, coarse timebase, pulse, NRZ, RZ
Optical-electrical (O/E) convertor (9221A and 922	Step, coarse timebase, pulse, NRZ, RZ
Optical-electrical (O/E) converter (9221A and 923	1A only)

#### Kit contents

- PicoScope 9200 PC Sampling Oscilloscope
- PicoScope 9000 Series Software CD
- Two SMA connector savers (supplied fitted to scope)
- Additional connector saver (9221A and 9231A only)
- Universal power supply with UK, US, EU and AUS/NZ plugs
- LAN patch cable (LAN models only)
- LAN crossover cable (LAN models only)
- TDR accessory kit (TDR models only)
- Installation guide
- USB cable
- Carry case

## TDR/TDT Accessory Kit included with PicoScope 9211A and 9231A

- 30 cm precision cable
- 80 cm precision cable
- 0 Ω short
- 50 Ω terminator
- Coupler
- Resistive power divider
- SMA wrench

## PicoScope 9200A models compared

	9201A	9211A	9221A	9231A
12 GHz sampling oscilloscope	•	•	•	•
USB port	•	•	•	•
LAN port		•		•
Clock recovery trigger		•	•	•
Pattern sync trigger		•	•	•
Dual signal generator outputs		•		•
Electrical TDR/TDT capability		•		•
8 GHz optical-electrical converter			•	•

#### Bessel-Thomson reference receiver filters

- For use with the optical-to-electrical converter on the PicoScope 9221A and 9231A
- Reduces peaking and ringing
- Choice of filter depends on the bit rate of the signal under analysis

Order Code	Bit Rates	Price (GBP)
TA120	51.8 Mb/s (OC1/STM0)	£80
TA121	155 Mb/s (OC3/STM1)	£80
TA122	622 Mb/s (OC12/STM4)	£80
TA123	1.250 Gb/s (GBE)	£80
TA124	2.488 Gb/s (OC48/STM16) / 2.500 Gb/s (Infiniband 2.5G)	£80

#### Attenuators

The following attenuators are available for use with all models in the 9200A series:

Order Code	Description	Price (GBP)
TA077	Attenuator 3 dB, 50 ohm SMA to SMA	£30
TA078	Attenuator 6 dB, 50 ohm SMA to SMA	£30
TA140	Attenuator 10 dB, 50 ohm SMA to SMA	£30
TA141	Attenuator 20 dB, 50 ohm SMA to SMA	£30

Ordering information	GBP	USD	EUR
PP463 PicoScope 9201A 12 GHz Sampling Oscilloscope	£5 995	\$9 892	€7 014
PP473 PicoScope 9211A 12 GHz Sampling Oscilloscope with CDR, LAN, TDR/TDT	£7 495	\$12 367	€8 769
Accessory Kit			
PP654 PicoScope 9221A 12 GHz Sampling Oscilloscope with 8 GHz Optical Input, CDR	£12 495	\$20 616	€15 119
PP664 PicoScope 9231A 12 GHz Sampling Oscilloscope with 8 GHz Optical Input, CDR,	£13 995	\$23 092	€16 934
LAN, TDR/TDT Accessory Kit
