## by Excelitas

### MVS 4100, 4200 Series

#### Overview

The VIGI-Lux™ MVS 4100 and MVS 4200 by Excelitas are cost-effective strobes for a wide variety of industrial inspection applications. The linear xenon flashlamp, mounted in a reflector for maximum intensity, provides 6 microsecond pulses at flash rates up to 100 Hz.

The discharge energy-per-flash remains constant at 180 mJ; no range-switching is needed.

The Xenon flashlamp in the VIGI-Lux MVS 4100 and 4200 produces intense pulses of radiant energy covering the full light spectrum from the ultraviolet (UV) to the visible (VIS) to near infrared (NIR). The spectral output of the

Xenon lamp when coupled with CCD, CMOS and CID silicon cameras freezes motion, eliminates blur, and enhances image quality with high intensity and short duration pulses.

These 20 Watt strobes are housed in a convection-cooled, rugged enclosure. Threaded holes at the bottom of the enclosure allow the unit to be hard mounted.

The VIGI-Lux MVS 4100 has an optically isolated trigger input and requires an external +5V TTL pulse to flash. The VIGI-Lux MVS 4200 has an internal oscillator and can be run in either external or internal trigger mode. It is ideal as a stand-alone unit for “stroboscopic” applications.
