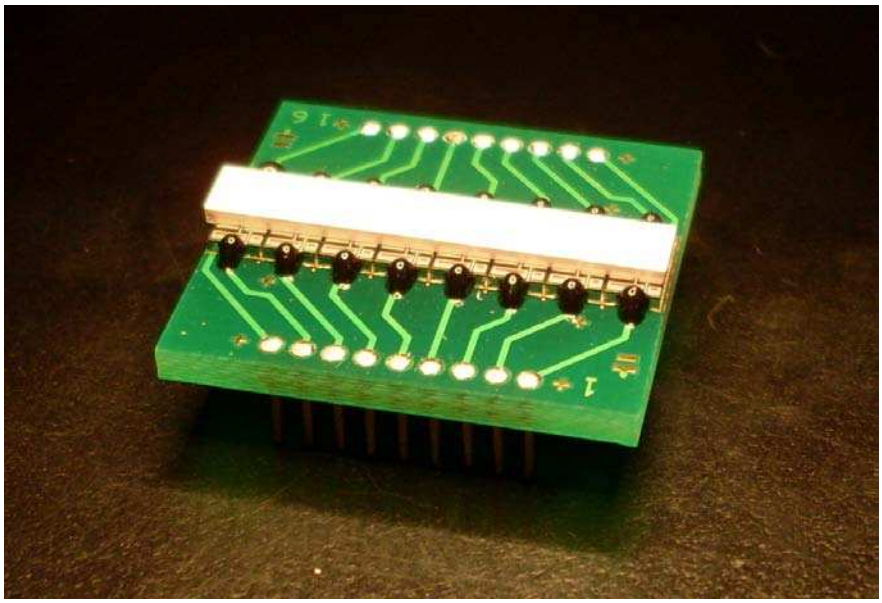
VTA1216H Series

Photodiode Arrays (PDA)



The VTA1216H-L-SC-08-1 is well-suited to X-ray Security Scanning at airports and at critical infrastructure locations

The VTA1216H series is a 16-channel High Resolution Photodiode Array (PDA). There are 8 dual-element photodiodes mounted directly on an FR-4 PCB. Wire bonds from the top of the chip are bonded directly to gold bond pads on the PCB. The pitch (sensor-to-sensor spacing of adjacent chips) for this series is 1.2 mm; other pitches are available as off the shelf or as custom devices.

A transparent coating material covers the photo-sensitive chip area while a globtop encapsulant protects the bond wires from damage. These parts are available with or without a scintillator material mounted over the photodiode active area to convert X-rays into visible photons of light.

These devices can be used as single energy detectors with a range of available scintillator crystals. They can also be used in dual-energy systems in a stacked configuration for simultaneous detection of low and high energy radiation for better atomic number discrimination. This technique is particularly useful in security applications such as luggage scanning in airports or at critical infrastructure locations (e.g. train stations, sports stadiums, courthouses).

Key Features

- Photodiode with extremely low dark current
- High signal-to-noise ratio
- Scintillator crystals available on demand to convert incident X-rays into visible photons
- 16-channels at 1.2 mm pitch

Applications

- Luggage Scanning
- Food inspection
- Cargo/container screening
- Nondestructive testing
- Industrial inspection

Nomenclature

VTA1216H series part numbers are in the following format: **VTA1216H-W-XX-YY-Z**

W: Energy type (H-High, L-Low)
XX: Scintillator (NC-No scintillator, SC-With scintillator)
YY: Scintillator type (see *Scintillator Selection Guide* section below for all standard scintillator types)
Z: Photodiode type (0-Regular capacitance, 1-Low capacitance)
