DESCRIPTION

The 1210 is a temperature compensated, piezoresistive silicon pressure sensor packaged in a dual-inline configuration. It is intended for cost sensitive applications where excellent performance and long-term stability are required.

Integral temperature compensation is provided over a range of $0-50^{\circ}$ C using laser-trimmed resistors. An additional laser-trimmed resistor is included to normalize pressure sensitivity variations by programming the gain of an external differential amplifier. This provides sensitivity interchangeability of $\pm 1\%$. Gage, absolute, and differential pressure ranges from 0-2 psi to 0-100 psi are available. Multiple lead and tube configurations are available for specific applications.

Please refer to the 1210 1 psi datasheet for low pressure applications. For voltage excitation, please refer to the Model 1220.

FEATURES

- Dual-in-Line Package
- 0°C to 50°C Compensated Temperature Range
- ±0.1% Non Linearity
- 1.0% Interchangeable Span (provided by gain set resistor)
- Solid State Reliability

APPLICATIONS

- Medical Instruments
- Airspeed and Altitude Measurements
- Process Control
- Factory Automation
- Vacuum Measurement
- Handheld Calibrators

Notes

- 1. Ratiometric to supply current.
- Best fit straight line.
- Maximum temperature error between 0°C and 50°C with respect to 25°C. For 2psi devices, Temperature Error -- Zero is ±1%.
- For a zero-to-full scale pressure step change.
- Long term stability over a one year period with constant current and temperature.
- 2X maximum for 100psi device. 20psi maximum for 2 and 5psi devices.
