

Cresnet® Interface to Crestron® CSM-QMT30 Shades

The CSC-DCCN is an interface designed to control one Crestron CSM-QMT30 shade motor and provide two-way communication between the motor and control system over Cresnet®. The CSC-DCCN features local buttons that allow for setting up limits and testing of the shades without use of the control system. In addition to controlling the shade motor, the CSC-DCCN provides 24 V power to a CSM-QMT30 motor. The CSC-DCCN can be surface mounted or mounted in a single-gang electrical box using a CSC-BRKT-1G mounting bracket (sold separately).

SPECIFICATIONS

Power Requirements

Power Pack: Use a Crestron® CSA-PWS40 Power Pack (sold separately; see in Available Accessories)
