DESCRIPTION

The SuperVerter series modules are high-density DC-DC converters designed for use in military and industrial applications such as on board vehicle and avionics electronic equipment. These are high power 28V input, 24V output, half brick modules that use insulated metal substrates, planar transformers, surface mount construction and thermally conductive potting to produce up to 240W of low noise, 24V output power.

TRIM RESISTOR CALCULATIONS

$$R_{trim-up} = \frac{24 \times (100 + \Delta\%)}{1.225 \times \Delta\%} - \frac{(100 + 2 \times \Delta\%)}{\Delta\%} \text{ kohms}$$

$$R_{trim-down} = \frac{100}{\Delta\%} - 2 \text{ kohms}$$

$\Delta\%$ = Desired Output Voltage Change ($\Delta\% > 0$)

$R_{trim-up}$ = External Resistor Value to Increase V_o

$R_{trim-down}$ = External Resistor Value to Decrease V_o
