### Applications

- Position measurement in steering systems
- pivotable vehicle bracings
- Transport systems with several axes
- Construction and agricultural machinery

The angle sensor RSX-7900 is designed for use in mobile applications under extreme environmental conditions. The sensor is suitable for a continuously ambitious operating.

The robust full metal housing with a double ball bearing stainless steel shaft and a superior seal concept protects the sensor against mechanical and other environmental influences.

The high accuracy and reliability of the magnetic angle measurement are further features, particularly in safety-related applications.

The massive but compact design allows direct mounting of the sensor without additional protective measures. Various shaft versions allow guidance via lever arm or other driving elements.

The centering of the housing can be done either by direct fitting by a 58 mm diameter frontside or as reverse fitting by a 16 mm diameter in the cover.
