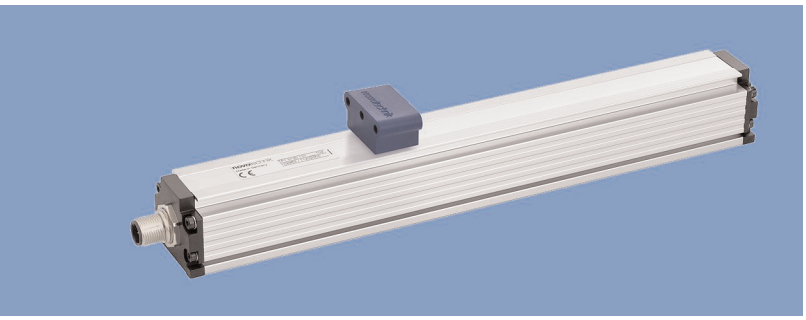
NOVOSTRICTIVE Transducer up to 4500 mm touchless absolute

Series TP1 with incremental Quadrature interface



Special features

- absolute transducer in robust profile design
- NOVOSTRICTIVE non-contacting magnetostrictive measurement principle
- non-contact position detection
- wear-free, unlimited mechanical life span
- incremental quadrature interface
- Power-On Burst with absolut position information
- excellent linearity up to 10 µm
- resolution up to 0.001 mm regardless of stroke length
- low temperature coefficient <15 ppm/K
- insensitive to shock and vibration
- cable or connector version available
- protection class IP67 / IP68

Position transducer with NOVOSTRICTIVE non-contacting magnetostrictive measurement principle for direct, accurate measurement of travel in display- or feedback applications.
The measurement with floating position marker takes place contactless and therefore wear-free.

The passive position marker (magnet) is optionally as floating or guided design available.
The fixing via mounting clamps allows a very simple, flexible mounting and a precise adjustment of the installation position.

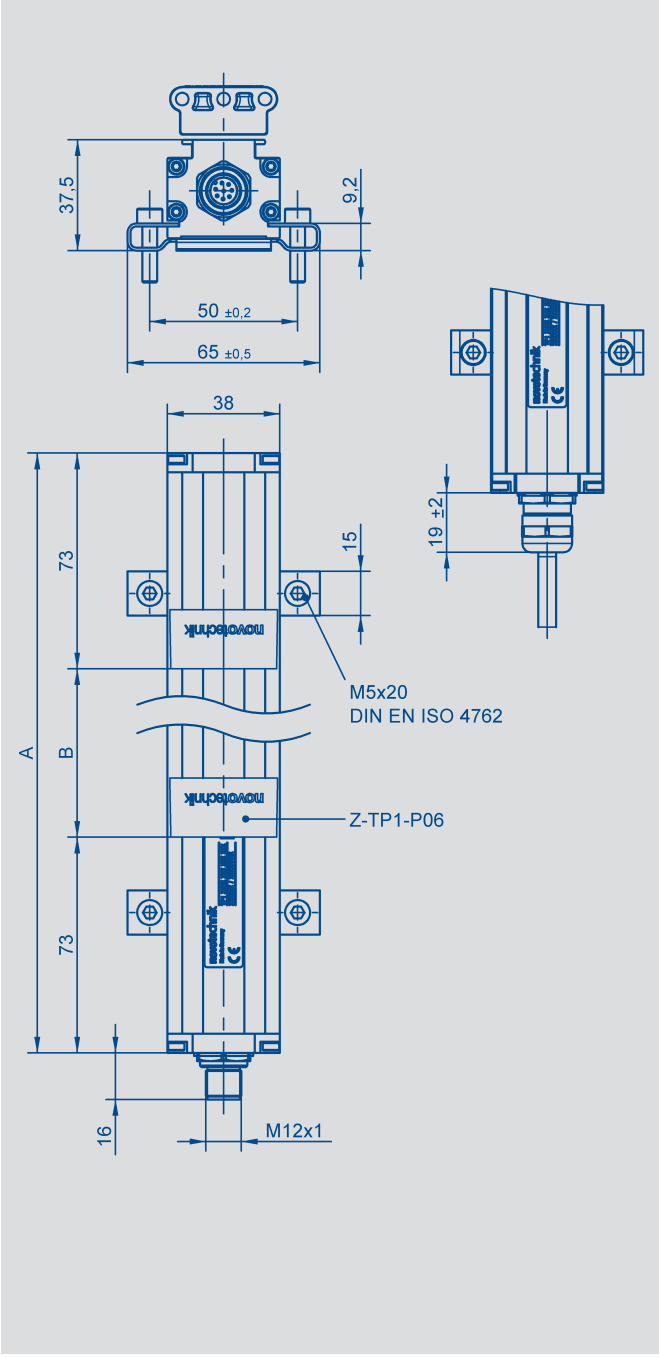
The aluminium housing was designed in such a way, that a closed tight construction form with reduced installation dimensions could be realized.
The transducer is insensitive to soilings such as dust, humidity or oils.
The high mechanical robustness of the transducer in combination with the measurement principle enables measuring stroke lengths up to 4500 mm.

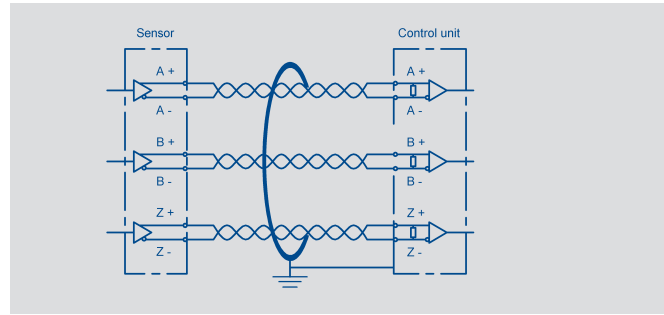
The transducer with incremental output can directly connected to usual standard encoder input devices for quadratur alternatively four-fold-processing.

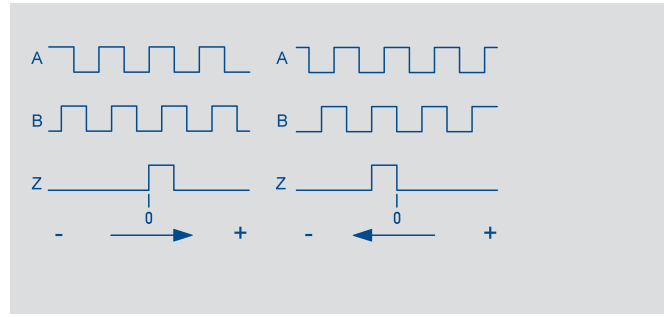
The integrated advanced ASIC electronics provides two of 90 degrees phase displaced A and B pulse and additional a reference Z pulse. For a safe data communication the signal transmission takes place via RS422.
Also an exceeding of the maximum velocity, does not lead to a loss of increments, after fall below of this velocity, the complement of increments will be available on the output. Therefore no static position failure will happen.
By the initialization phase after Power-On, the absolute position value will be available on the signal unit, hereby a reference drive (Power-On-Burst) is not required.

Additional interfaces see separate data sheet.

Description	
Housing	Aluminium, anodized, metal end flanges
Mounting	adjustable clamps
Position marker	floating position marker, plastic guided position marker, ball coupling
Measuring principle	NOVOSTRICTIVE touchless magnetostrictive
Electrical connections	8-pin round connector, shielded, M12 x 1 8-wire PUR / PVC-cable, 8 x 0.25 mm², shielded: 1 m, 5 m or 10 m length
Electronic	SMD with ASIC, integrated Connector casing resp. shield is connected with the sensor housing, housing is capacitive decoupled to the electronic







Output connector Code 102	Cable Code 201, 203, 205	Connector with cable signal EEM33-86, EEM33-87

Important
Avoid equalizing currents in the cable shield caused by potential differences. Twisted pair cable is recommended.
