

protoX™

Ready-to-Fly Nano Electric Drone

**Available
in six great
colors.**

The original nano drone!

The drone that was named "Toy of the Year" at the 2014 Nuremberg and London Toy Fairs now has a new distinction: it's still the best-selling nano drone in the world and it's easy to see why. With a diagonal of 50 millimeters and a weight of just 11.5 grams, the Proto-X can be safely flown in virtually any room of the house. High-intensity LEDs make it easy to track even in a totally dark room, while an advanced stabilization system keeps it stable, upright and easy to fly. Its 2.4GHz radio links the Proto-X to your radio, so you can fly with friends and without worrying about interference!

- Assembled and ready to fly! Just add two "AAA" batteries.
- Sleek, futuristic body with high-intensity LEDs on all 4 rotors.
- Auto-Upright system automatically rights the drone when it tilts.
- Available in six bold, bright colors.

The Proto-X includes:

- Assembled airframe with finished canopy, stabilization system and colored LEDs
- 2.4GHz controller
- Rechargeable 3.7V 100mAh LiPo battery
- USB charge cord
- (4) Extra blades

Stock Numbers:

ESTE48GG – Green
ESTE48LL – Black
ESTE48RR – Red
ESTE48WW – White
ESTE48PP – Purple
ESTE48YY – Yellow

Specifications:
