

protoN™

Ready-to-Fly Nano Electric Drone

Available in
four great
colors.

Introducing the world's smallest drone!

With a diagonal of only 31 mm, the Proto-N is so small that it can be stored in the transmitter you use to fly it and fly indoors when bigger drones are grounded! The Proto-N is tiny, but it's also so easy to fly that virtually anyone can enjoy it. Assembled and complete, it includes an interference-free 2.4GHz transmitter that lets you fly with friends and do flips with the push of a button!

- Take-anywhere tiny: fly it in your home, garage, office or other indoor setting.
- Easy to hover: includes a 3-axis gyro and accelerometers that automatically keep it stable and level.
- Lets you look like a pro while it performs flawless flips and barrel rolls on demand.
- Ultralight for quicker response and spectacular performance.
- Includes high-intensity LEDs for easy tracking even in a dark room

Includes:

- Assembled, finished drone with advanced stabilization system and LEDs
- 2.4GHz transmitter with flip button, trims, three flight modes and battery LED
- Rechargeable 3.7V 80mAh LiPo battery
- USB charge cord
- (4) Extra blades
