

INTERNATIONAL RECTIFIER

REPETITIVE AVALANCHE RATED AND dv/dt RATED

HEXFET® TRANSISTOR

IRFI460

N-CHANNEL

500 Volt, 0.27 Ohm HEXFET

The HEXFET® technology is the key to International Rectifier's advanced line of power MOSFET transistors. The efficient geometry design achieves very low on-state resistance combined with high transconductance.

The HEXFET transistors also feature all of the well established advantages of MOSFETs such as voltage control, very fast switching, ease of paralleling and temperature stability of the electrical parameters.

They are well suited for applications such as switching power supplies and virtually any application where military and/or high reliability is required.
