Description

Fifth Generation HEXFET® Power MOSFETs from International Rectifier utilize advanced processing techniques to achieve extremely low on-resistance per silicon area. This benefit, combined with the fast switching speed and ruggedized device design that HEXFET Power MOSFETs are well known for, provides the designer with an extremely efficient and reliable device for use in a wide variety of applications.

The TO-220 package is universally preferred for all commercial-industrial applications at power dissipation levels to approximately 50 watts. The low thermal resistance and low package cost of the TO-220 contribute to its wide acceptance throughout the industry.

The D²Pak is a surface mount power package capable of accommodating die sizes up to HEX-4. It provides the highest power capability and the lowest possible on-resistance in any existing surface mount package. The D²Pak is suitable for high current applications because of its low internal connection resistance and can dissipate up to 2.0W in a typical surface mount application.

The through-hole version (IRF630NL) is available for low-profile application.

The diagram shows a Class D amplifier circuit. At the top, a D.U.T. (Device Under Test) is represented by a circle containing a diode bridge rectifier. It has two input terminals labeled '+' and '-'. A callout '3' points to the output of the D.U.T. Below the D.U.T., there is a transformer with a primary winding connected to the D.U.T. output and a secondary winding connected to the gate of a MOSFET. A callout '2' points to the primary winding. The MOSFET's source is connected to ground, and its drain is connected to the output of the amplifier. A callout '4' points to the output node. The output is connected to a load resistor through an inductor. A callout '1' points to the input of the MOSFET, which is driven by a square wave pulse generator through a gate resistor R_G . The MOSFET is also represented by a circle containing a diode bridge rectifier. The output is connected to a load resistor and then to a power supply V_{DD} .

Circuit Layout Considerations

- Low Stray Inductance
- Ground Plane
- Low Leakage Inductance

Current Transformer

- dv/dt controlled by R_G
- Driver same type as D.U.T.
- I_{SD} controlled by Duty Factor "D"
- D.U.T. - Device Under Test

Dimensions are shown in millimeters (inches)

Notes:

- ① Repetitive rating; pulse width limited by max. junction temperature.
- ② Starting $T_J = 25^\circ\text{C}$, $L = 6.5\text{mH}$, $R_G = 25\Omega$, $I_{AS} = 5.4\text{A}$.
- ③ Pulse width $\leq 400\mu\text{s}$; duty cycle $\leq 2\%$.
- ④ This is only applied to TO-220AB package.
- ⑤ This is applied to D²Pak, when mounted on 1" square PCB (FR-4 or G-10 Material). For recommended footprint and soldering techniques refer to application note #AN-994.
- ⑥ $I_{SD} \leq 5.4\text{A}$, $di/dt \leq 280\text{A}/\mu\text{s}$, $V_{DD} \leq V_{(BR)DSS}$, $T_J \leq 175^\circ\text{C}$.

TO-220AB package is not recommended for Surface Mount Application.
