

**2.5V/3V, 3.0GHz CML
AnyGate[®] ANY LOGIC
WITH 50Ω or 100Ω OUTPUTS**

**SuperLite™
SY55851
SY55851A**

FEATURES

- **Guaranteed AC parameters over temperature:**
 - $f_{MAX} > 3.0\text{GHz}$ (SY55851A)
 - $t_r / t_f < 100\text{ps}$
 - Propagation delay $< 280\text{ps}$
- **Guaranteed operation over -40°C to $+85^\circ\text{C}$ temperature range**
- **Wide supply voltage range: 2.3V to 3.6V**
- **Single IC provides 8 logic functions**
- **2:1 MUX capability**
- **Fully differential I/O**
- **Source terminated CML outputs for fast edge rates:**
 - SY55851 for 100Ω load
 - SY55851A for 50Ω load
- **Guaranteed matched propagation delays:**
 - Select (S)-to-out: $< 280\text{ps}$
 - Input (A and B)-to-out: $< 280\text{ps}$
- **Accepts PECL, LVPECL, CML input signals**
- **Functions as a PECL/LVPECL-to-CML translator**
- **Available in a 10-pin (3mm x 3mm) MSOP package**

SuperLite™

DESCRIPTION

The SY55851 and SY55851A are highly flexible, universal logic gates capable of up to 3.0GHz operation (SY55851A). These AnyGate[®] differential logic devices will produce all possible logic functions of two Boolean variables. They can be configured as any of the following gates: AND, NAND, OR, NOR, XOR, XNOR, DELAY, NEGATION (NOT). The SY55851 and SY55851A can also function as a 2-input multiplexer.

The SY55851 has an output stage optimized for 100Ω loads, and the SY55851A is optimized for 50Ω loads. The differential inputs for both devices are normally terminated with a single resistor (100Ω) between the true and complement pins.

APPLICATIONS

- **Port bypass**
- **Data communication systems**
- **Wireless communication systems**
- **Telecom systems**

1. Contact factory for die availability. Dice are guaranteed at $T_A = 25^\circ\text{C}$, DC Electricals only.
2. Tape and Reel.
3. Pb-Free package recommended for new designs.

PIN DESCRIPTION

Pin Number	Pin Name	Pin Function
1, 2	S, /S	CML, PECL, LVPECL Input Selector: This differential CML input is one of the inputs to the logic block. It represents either one Boolean input for a 2-variable logic function, or the select input for a 2-input MUX.
3, 4	A, /A	CML, PECL, LVPECL Input: This is one of the differential inputs to the logic block. For a 2-variable logic function, it is either a constant value or a Boolean input. For a 2-input MUX, this signal represents the output when S is set to logic zero.
5	GND	Ground.
6, 7	/Q, Q	Differential CML Output: This is the differential CML output for the logic block. For termination guidelines, see Figure 3.
8, 9	B, /B	CML, PECL, LVPECL Input: This is one of the differential inputs to the logic block. For a 2-variable logic function, it is either a constant value or a Boolean input. For a 2-input MUX, this signal represents the output when S is set to logic one.
10	VCC	V _{CC} .

FUNCTIONAL DESCRIPTION

Establishing Static Logic Inputs

The true pin of an input pair is internally biased to ground through a 75kΩ resistor. The complement pin of an input pair is internally biased to $V_{CC}/2$ through an internal voltage divider consisting of two 75kΩ resistors. Since some logic functions necessitate an output to be connected to two inputs, SY55851/A inputs have no internal terminations. Typically, one resistor between the true and complement input is all that is required, as per **Figure 3**. To keep an

input at static logic zero at $V_{CC} \geq 3.0V$, leave both inputs unconnected or tie the complement input to V_{CC} . For $V_{CC} < 3.0V$ applications, connect the complement input to V_{CC} and leave the true input unconnected. To make an input static logic one, connect the true input to V_{CC} , and leave the complement input unconnected. These are the only safe ways to cause inputs to be at a static value. In particular, no input pin should be directly connected to ground. All NC (no connect) pins should be unconnected.

CML TERMINATION AND TTL INTERFACE

All inputs accept the output from any other member of this family. All outputs are source terminated 100Ω or 50Ω CML differential drivers as shown in Figure 3. All inputs to the SY55851/A must be externally terminated. SY55851/A

inputs are designed to accept a termination resistor between the true and complement inputs of a differential pair. 0402 form factor chip resistors will fit with some trace fanout.
